## Pharmaceutical price controls and entry strategies

**Andrews Abaitey**  
Vine Medics, Ghana

**Introduction:** The special nature of pharmaceutical market, price controls on pharmaceutical while controlling for the market structure and of firm ( and products characteristics in estimating the extent and timing of the launch of the new drugs around the world .Price controls are form to have a statistically and quantitatively

Important effect on pharmaceutical launches. Drugs invented by firms headquartered in countries that use price controls. Price controls have a non- uniform impact on firms in different countries, in particular, Italian and Japanese firms tend to introduce theirs in price controls markets more quickly than America or British firm. Company delay launch into price controlled markets, and are likely to introduce their products in additional markets after entering a country with price controls.

**Observation:** The special nature of the pharmaceutical market (due to patent protect, third-party payers and low price elasticity) has led to the introduction of the regulation in European market, a variety of policy measures have been implemented in the European union in other to control pharmaceutical prices. These measures differ significantly across countries, but have a common goal of efficient dispensing and keep prices at reasonable levels.

While element of industrial policy are found in some countries, regulatory measures target both the demand side as well as the supply side.

**Conclusion:** the results suggest that price regulation in one country affects entry into other countries and may affect the strategies of the domestic firms
