Kea Hangsovann

SV Clinic and Laser, Cambodia

Facial peeling for Southeast Asians, especially in Cambodia

Chemical peeling, also termed chemexfoliation, represents accelerated exfoliation or skin damage induced by caustic agents that cause controlled damage, followed by the release of cytokines and inflammatory mediators, resulting in thickening of the epidermis, deposition of collagen, reorganization of structural elements, and increases in dermal volume. This process decreases solar elastosis and replaces and reorients the new dermal connective tissue. The result is an improved clinical appearance of the skin, with fewer rhytides and decreased pigmentary dyschromia, and a more youthful appearance.

Biography

Kea Hangsovann is an owner of SV Clinic and Laser, Cambodia. He is a member of International Peeling Society, Swiss Academy of Cosmetic Dermatology and Aesthetic Medicine (SACDAM) and Endopeel user. He is an Aesthetic Medical Doctor, specializes in "Acne treatment, chemical peeling, scar treatment, filler, endopeel, skin disease, mesotherapy, allergy dermatitis, anti-aging, and laser".
