

# WORLD COSMETIC AND DERMATOLOGY CONGRESS & INTERNATIONAL DERMATOLOGY CONFERENCE: SKIN AND BODY November 26-27, 2018 Bali, Indonesia

## New era of non-invasive female genitalia rejuvenation in skin of color by Fractional Erbium Yag

**Ornkes Panyanetnad**

Bangpakok 9 International Hospital, Thailand

Intimate areas are now the new playing zone in the aesthetic market. For intravaginal treatment, fractional erbium laser has a well-established role in treating urinary symptoms altogether with increasing vaginal wall thickness, lubrication, sexual intercourse satisfaction and reducing symptoms from atrophic vagina. However, for external genitalia with denser pigmentation, the concern is for the post procedural hyperpigmentation that can happen post erbium laser treatment. We have carried out the first external genitalia rejuvenation with fractional erbium MCL clinical study trial in Fitzpatrick skin type IV-V. The results are impressive and most of the cases are satisfied with the results. There are significant improvements in genital fullness, firmness, skin lightening, GAIS improvement, or even sexual intercourse satisfaction. Pain is tolerable with regular topical EMLA cream. Every case can resume daily life activity immediately after the treatment and normal sexual activity within 72 hours. Healing period speed relies on each case's post operative compliance and health status. In conclusion, fractional erbium MCL is safe and effective way for intimate area rejuvenation with standardized treatment protocol.

### Biography

Ornkes Panyanetnad accomplished her 1st class honored medical degree from Chulalongkorn University. She furthered her study as the youngest graduated diploma of dermatology from Ramathibodhi hospital. Dr. Ornkes was invited to be the advisory board and keynote speaker for advanced level training of various international companies and courses to train the advanced uses of filler, botox, and thread lift, and invited to be the speaker for holistic anti-aging, cellular and nutrition therapy. With her extensive experience, Dr. Ornkes has invented her own technique "Blunt en bloc", "crepe cake layering technique", and "GFAn – Global facial analysis with natural look injection technique" for more scrupulous filler injection, facial asymmetry correction and focused on natural-looking botulinum Page 1 of 3 toxin injection technique.
