Facial contouring surgery in conjunction with orthognathic surgery

Westernization of the criteria of facial beauty in east north Asia including Korea, the development of surgical technique for the facial bone and anesthesiology increase the the number of facial bone surgery including orthognathic surgery which improve the facial contour. In general, facial bone surgery comprise orthognathic surgery which involves occlusion and facial coutouring surgery which change contour of face without occlusal change. Orthognathic surgery as facial aesthetic surgery is important and the demand for facial contouring surgery and rhinoplasty is increasing in view point of Oral & Maxillofacial surgeons. In this presentation the concepts of contents and frame for facial aesthetics are explained and the effects of orthognathic surgery on facial aesthetics are evaluated. In addition, facial contouring surgery (Genioplasty, Mandibuloplasty, Malar plasty) will be explained and discussed.
