Power assisted liposuction re defined-Safelipo

Marcelo Uriarte Mayorga

Uriarte Cirugia Plastica, Bolivia

Liposuction is the second most common procedure performed in the world and numerous techniques and technologies have been added to make it safer, quicker to improve better outcomes The objective of this work was to evaluate parameters related to Liposuction Technique introducing the concepts of SAFELipo: Separation, Aspiration and Fat Equalization also the use of PAL device to infiltrate tumescent fluid and Perform Fat Grafting As one year follow up we present the results improving the overall Liposuction Technique and Faster and better outcomes after perform the SAFELipo technique.
