April 14-16, 2014 Hilton San Antonio Airport, TX, USA

Alternative therapies for chronic and refractory skin ulcer- Clinical managements and experience by traditional Chinese medicine

Fu-lun Li and Bin Li

Shanghai University of Traditional Chinese Medicine, China

Chronic skin ulcer (CSU), including diabetic ulcers, venous ulcers, radiation ulcers, and pressure ulcers, remains a great challenge in the clinic. It seriously affects Patients quality of life and requires long-term dedicated care, causing immense socioeconomic costs. CSU causes the loss of the integrity of large portions of the skin, even leading to morbidity and mortality. Chinese doctors have used traditional Chinese medicine (TCM) for the treatment of CSU for many years and have accumulated much experience in clinical practice by combining systemic regulation and tropical treatment of CSU. Here, we discuss the classification and pathogenic process of CSU and strategies of TCM for the intervention of CSU, according to the theories of TCM. We also present several clinical cases showing effectiveness of Traditional Chinese herbs in the management of CSU. Finally, we summarize the potential intervenient strategies named as “qing-hua-bu” protocol with dynamic and combinational TCM therapies for different syndromes of CSU.

Biography

Fu-lun Li obtained his medical degree from Shanghai University of Traditional Chinese Medicine in 2004. He is specialized in dermatology and pharmacology of TCM. His research is focused on the mechanism of psoriasis, skin ulcer, wound healing and autoimmune disorders. He has been a post doctor at Colorado University for 3 years and currently is an associate chief physician of Yueyang Hospital affiliated to Shanghai University of TCM. He has published 9 papers in reputed journals including Nature medicine, American Journal of Pathology.

Bin Li obtained his medical medical degree from Shanghai University of Traditional Chinese Medicine in 1997. He is specialized in the dermatology of Traditional Chinese Medicine. He has been a visiting scholar at South Korea Daejeon University and currently is the Director of dermatology of Yueyang Hospital of Shanghai University. His research is focused on the mechanism of psoriasis, skin ulcer, and wound healing and autoimmune disorders.
