July 21-23, 2014 Hampton Inn Tropicana, Las Vegas, USA

Men and women hair transplant: A permanent solution

Jorge I Gaviria

Miami Beach Hair Institute, USA

Introduction: Hair Transplantation is a new profession in the history of medicine. Hair loss is the result of one's genetic makeup. The hair loss gene can be inherited from your mother's or father's side of the family. The leading cause of hair loss in men is male pattern baldness or Androgenetic Alopecia. Hair loss in women is also related to genetics, hormones and age.

Objective: The aim of this presentation is to show state of the art techniques in hair transplant surgery, and offer some tips in the practice of hair restoration.

Materials and Methods: Strip harvesting and FUE are both acceptable techniques for harvesting donor grafts. Each technique has advantages and disadvantages. On a cost-benefit ratio strip harvesting would seem to provide the most cost effective procedure. FUE is well suited for patients who insist on not having a linear scar.

Results and Discussions: Technical and aesthetic components of performing hair transplant surgery will be discussed, in order to produce consistently good results. How to customize every patient's case and different options for planification will be presented.

Conclusion: Aside from hair transplantation surgery, there aren't any other permanent hair loss remedies. Over-the-counter medication (Propecia and Rogaine) brings temporary - and only works for as long as you take the medication.

Biography

Jorge I Gaviria completed two accredited fellowship programs in Hair Restoration from Orlando, Florida. He brings a research background to his artistic craft. He is a Principal Investigator and has authored several protocols on the topics of: Evidence Based Medicine, Donor Site Closure, Dense Packing, FUE, Survival Rates and Digital Medical Hair. His most well known study is on Trichophytic Closures. This closure procedure creates a non visible scar. He is licensed to practice in Barcelona, Colombia, Puerto Rico and actually practices Hair restoration surgery in Miami Beach, Florida. He offers ethical assessment of a patient's treatment options, exceptional surgical skills, and has keen aesthetic sense in hair transplant design.
