

3rd International Conference and Exhibition on **Cosmetology & Trichology**

July 21-23, 2014 Hampton Inn Tropicana, Las Vegas, USA

Cosmetic dermatology facial enhancement

Neil Sandhu
Mohs surgeon, USA

Cosmetic dermatology has come a long way. With the aid of technological advances and further understanding of the skin and all its layers and keys structural components, we are now able to enhance and reverse the signs of aging with the use of minimally invasive in office procedures. Botox is the number one cosmetic procedure done in office. This is used to correct dynamic rhytides to make us all look more youthful and pleasant looking. Fillers have revolutionized the cosmetic industry. Various fillers are now available to correct many and almost all areas of tissue loss, including the nasolabial folds, marionette lines, maxillae, temples, lips, tear troughs, dorsal hands, etc. Lasers are a great tool for eliminating textural and pigmentary changes of the skin. We can now treat anything from solar lentigines to hemangiomas to static rhytides so our patients can feel and look better.

Biography
