Treatment with plasma exeresis for non- surgical blepharoplasty new

Tsioumas G Sotiris, Georgiadis Nikolaos² and Georgiadou Irini²

¹University of Camerino for Aesthetic Medicine, Italy

²Aristotle University of Thessaloniki, Greece

The survey aims to highlight new noninvasive techniques on Oculoplastic focusing on the eyelid. Research and test object were 80 patients, age range 40-78 years, who had problems of small, medium and high degree of ptosis and problems from older surgical blepharoplasties. Common factor and 80 cases were surgical avoidance desire, due to cost and fear in the process. The method of solving the mentioned problems was the bloodless blepharoplasty using Plasma Exeresis. For the evaluation of the results through Plasma Exeresis method, set a satisfaction scale of 1 to 5 (1 = not at all satisfied - 5 = completely satisfied). All patients have described the results of treatment as 5.
