Visual processing disorder in children

Salai Dhavamathi Janarthanan
Amity University, India

The moment people consider visual perception, they by and large consider exactness, ordinary 6/6 vision. Be that as it may, it is substantially more than that is the cerebrum, which forms the visual world, including things like images, pictures, and separations. Blames in these cerebrum undertakings are called visual preparing issue or visual handling issues. Numerous guardians and educators discover hard to perceive the signs and manifestations of a Visual Processing Disorder (VPD) in their kid or understudies. They additionally regularly mistake for learning disabilities. This small scale audit expects to clarify the nitty gritty depiction of the visual preparing issues and how to defeat through some vision, social and instruction treatments..
