

A review of cystic lesions of the orbit in upper Egypt children

Abd El-Nasser A Mohammad

Assiut University Hospital, Egypt

In the last 13 years (from July, 1999 to June, 2012), 259 cases of orbital cysts in children were registered at the orbital clinic of Assiut University Hospital, the referral center of Upper Egypt. The series have included common cysts such as dermoids as well as rare cysts such as microphthalmia with huge cyst, hydatid cyst and congenital teratoma. The clinical and neuro-imaging findings for each type will be discussed. Recommendations during surgical handling will be focused.
