Intra operative floppy iris syndrome in cataract surgery

Annavajjhala Venkatachalam and A Sriram
Hyderabad Eye Hospital, India

Intra-operative Floppy Iris Syndrome (IFIS) is a nightmare for cataract surgeons all-around the world. The surgeon has to anticipate the complication and try to manage this unusual complication. In this paper, we will be discussing the different causes that lead to Intra Operative Floppy Iris Syndrome (IFIS) like systemic usage of alpha-1 blockers, local pilocarpine eye drops etc., and intra-operative symptoms, signs and various ways of managing this complication.
