Risk factors associated with cataract surgery: An analytical overview

Subhash Mishra

Directorate of Health Services-Chhattisgarh, India

There are many factors which affect the outcome of cataract surgery sometimes resulting into serious complications. Outcome of same surgeon with same protocol and IOL and medicines may be different due to patient factor. Similarly medicine factor, IOL factor, assistant factor, sterilization factor lead to different complications varying from visual unhappiness to loss of eye. These factors are grouped and discussed to make an eye surgeon understand and capable of dealing with them to provide a safe and effective sight restoration in cataract surgery. Some instances of mass post-operative endophthalmitis are mentioned with analysis of possible causes.
