How to manage complications of flap in Z-LASIK surgery

Sophia Pujiastuti

Fatmawati Hospital, Indonesia

Intraoperative complications related corneal flap complications are incomplete or short or irregular flaps, free cap, flap buttonhole, anterior chamber gas bubbles, vertical gas breakthrough and corneal perforation. Incidence corneal flap complications are rare, however, between 0.3–14% of these complications occur which depends on the type of device used. There are two options management corneal flap complication for the second intervention: first: Recut and the second: surface ablation performed over the incomplete flap via either photorefractive keratectomy or Laser Sub-Epithelial Keratomileusis (LASEK).
