Combined surgery: Phacoemulsification plus trabeculectomy

Pradip Kumar Mohanta

Netrajyoti Eye Hospital, India

Many eye surgeons are extremely competent in Phacoemulsification. Many others are competent in trabeculectomy and many are not competent in both the surgeries. But to manage a patient having cataract plus open angle glaucoma simultaneously, an eye surgeon needs to develop the skill of combined surgery i.e. phacoemulsification plus trabeculectomy in the same surgical setting. In this video based presentation, combined surgery will be demonstrated with emphasis on releasable sutures to control IOP postoperatively.

Biography

Pradip Kumar Mohanta is a renowned and respected Ophthalmologist in Ranaghat, Nadia (West Bengal) and an experienced Eye Surgeon. He is proficient in all types of eye surgeries, especially phaco and vitreo-retina. He completed his MS in Ophthalmology from the Post-graduate Institute of Medical Education and Research (PGIMER) in Chandigarh.
