

2nd International Conference on

Eye and Vision

September 26-28, 2016 Orlando, USA

Advances in visual skills training

Lawrence D Lampert

Dr. Lawrence D Lampert Clinic, USA

Vision care presently concerns itself with visual acuity, ocular health, and systemic health. Visual skills training goes beyond that to include the use of vision as sense gathering information, directing action and the training of those skills. This talk will go over the rationale for and advances in visual skills training for learning, sports performance, TBI, and risk management in the areas of falls prevention, driving safety and law enforcement.

Biography

Lawrence D Lampert is a developmental/behavioral Optometrist with a private office in Boca Raton, Florida. He is among only 350 in the world that has completed a fellowship in Developmental Vision. In addition to general eye care, he works with children and adults that have visually related learning problems, develops sports vision programs for professional and amateur athletes and is on the medical staff of Pine Crest Rehab Hospital where he does Neuro Optometric Rehabilitation.
