

3rd International Conference and Exhibition on Nutrition & Food Sciences

September 23-25, 2014 Valencia Convention Centre, Spain

From chemoprevention to identification of potential therapeutic targets and biomarkers for breast cancer

Somya Shanmuganathan, Allal Ouhtit, Ishita Gupta, Hamad Al-Riyami and Madhwa Raj
Sultan Qaboos University, Oman

Over the years, several phyto-compounds have been extensively used in Complementary Alternative Medicine (CAM) studies, individually and often at higher doses to kill cancer cells. Based on the combination and synergism theory, we had previously demonstrated that a combination of Resveratrol and Indole-3-Carbinol synergized and killed a maximum number of Breast Cancer cells. In the present study, we have tested various combinations of 10 well known phytochemicals, used at bioavailable levels, for their effect on cell growth and proliferation of the MDA-MB-231; breast cancer (BC) cell line and MCF-10A; normal breast epithelium as control cell line. The results revealed a super combination of 7 phyto-compounds (7SC), that synergized and induced 100% clearance of the BC cells but did not affect the normal breast epithelial cells. Next, in order to understand the underlying molecular mechanism of this 'synergism' effect, microarray analysis will be conducted on the mRNA collected from the 7SC treated and control cells at 12 and 24 hour time points. Ongoing in vivo experiments aim to evaluate the efficacy of the 7SC phyto-compound treatment in preventing tumor growth using xenograft mouse BC model, and further validate the functional relevance of these genes in BC cell growth and survival. The data supports our hypothesis that the 7SC could be used in CAM as a dietary supplement approach against BC, and further identify genes that have the potential to serve as biomarkers and gene candidate to guide the design of appropriate anti-BC therapeutic strategies.

Biography

Somya Shanmuganathan is currently pursuing her third year PhD in Genomics of Breast Cancer at the Sultan Qaboos University, Oman. Prior to her PhD, she completed her Master of Business (Merit) at the Australian National University (Australia), Master of Biotechnology at the University of Queensland (Australia) and Master of Science in Applied Microbiology at the VIT University (India). She has been a reviewer for a number of articles in several reputed international journals and is currently involved in several breast cancer research works.
