## Chylothorax combined with Chylopericardium and right diaphragmatic paralysis after coronary revascularization by bilateral internal mammary artery

Hassan Salem AlSharyah, Ahmed Attia, Farouk Ouida and Yasser ELghoneimy  
Saud Albabtain Cardiac Center, King Fahd University Hospital, Saudi Arabia

Chylopericardium is extremely a rare complication after Coronary artery bypass surgery. We report a case of chylothorax combined with chylopericardium and right diaphragmatic paralysis as a complication of CABG. Proper surgical intervention after failure of conservative treatment reducing possible deterioration to the patients as well has a significant improvement on the clinical condition of the patient.
