# Gynecology & Gynecologic Oncology

July 23-24, 2018 | Rome, Italy

## Where are we in aesthetic genital surgeries for a better feminine life?

**Süleyman Eserdağ**

International Society of Aesthetic Genital Surgery and Sexology, Turkey

Aesthetic- Plastic genital operations and energy based genital cosmetic managements are the fastest growing segment within all of the aesthetic surgeries. These operations are being done for aesthetic, functional, hygienic, medical and for sexual purposes. Labiaplasty, vaginal tightening and perineoplasty operations are the most globally demanded operations by the patients. On the other hand, genital laser, radiofrequency and PRP (Platelet Rich Plasma) are the non-invasive methods which can be applied for functional and cosmetic reasons as well. The patient's needs, expectancy and tissue anatomy should be very well evaluated before the surgery to get best results. And the surgeon should have training before starting these kinds of operations.
