2nd International Conference on

Sleep Disorders, Medicine & Integrative Medicine

November 28-30, 2016 Atlanta, USA

Mehmet ferit Isbir

Akeniz Univ Medical, Turkey

Why modern medicine should coalesce with integrative medicine for the sake of human being

When alternative medicine treatment is used with medical theraphy in a belief that "it complements" improves the effect of theraphy and it is considered or named as Integrative Medicine. Actualy Integrative Medicine is a way of improving of life styles, behaviour, which provide a supportive partnership to either preventive medicine or to medical theraphy. To achieve its goals Integrative Medicine uses Herbes and Nutritonal counselling among other methods of theraphy. It is already accepted that via Integrative Medicine improving health behaviour can lead, in over all health and well –being and reduce the disease risk so with this can help the modern Medical theraphy. Beside these Integrative Medicine is also very important for drug discovery, especially while in search for lead compound, Quinin from Cinchona is agood example for this. Integrative Medicine will use the interaction of Drug-Herb, Herb-Herb, Herb-food and Drug –food. But these interaction may cause advers effect even toxic effects such as using Gonkoa Bilboa with Warfarin reduced the absorbtion of Warfarin

As a result: There is a long –running debate between the authoraties who use herbal remedies and Nutritional support for various diseases and medical doctor "Physician". Though it is believed that there is no scientific background for integrative Medicine at the past currently it is proved using Integrative Medicine with conventional Medical Theraphy, increase the effects of Medical theraph.

As result of my Retroperspective study I come to end that Integrative Medicine must be used with conventional medicine for the sake of Human especial the ill ones.

Biography
