Brain and behavioral health treatment for victims of trauma

Buzz Mingin  
California Coast University, USA

Buzz has formulated customized treatment plans for individuals who suffer psychological, emotional and physical trauma. Using Spect Imaging, Neurotransmitter testing, Genetic Testing, Cognitive Behavioral Therapy, and Havenung Psychosensory Techniques, he has recovered the lives of many patients, he has investigated and treated who suffer from Trauma. He explains how the brain functions as the brain attempt to protect people from stress, provocation, and violence. A breakdown and description are given of the cortical and subcortical regions of the brain with an emphasis on the Limbic System. Behavioral manifestations of Trauma symptomatology are described and “acted out” by him, in an animated fashion, so attendees can appreciate the struggles people who suffer trauma experience. He also demonstrates how individuals who suffer Trauma are often misdiagnosed with Bipolar, Depression, ADHD, Anxiety, and Oppositional Defiant Disorder. Not to mention, inaccurate medication treatment to address the same. This presentation is high energy and practical. All content taught is applicable for immediate use. Adequate time for questions and answers will be provided as well.

Biography

Buzz Mingin has his PhD in Education and his PsyD in Clinical Psychology. As an expert witness for special education litigation in the state of New Jersey. He is also a certified School Social worker and a Certified Forensic Counselor as well. He has performed over 3,000 seminars to date as he speaks all over the country on Brain and Behavioral Health. As an affiliate of the Amen Clinic, Manhattan location, he uses SPECT Imaging as a means of investigating the brain to understand the nature of his client’s concerning issues and to develop treatment plans that are measurable with efficacy.
