

5<sup>th</sup> Annual Congress on

## CHEMISTRY IN DRUG DISCOVERY &amp; DESIGNING

April 16-17, 2018 Dubai, UAE

**New discovery of treatment of complicated hemorrhoids without surgery****Ahmed M A Masaad**  
Taif University, KSA

The new treatment is mainly depending on mechanism of contraction of the connective tissue surrounding the venous around anus by effervescent tannin base with strong anti-bacterial, antifungal and anti-viral effect of formula. The safety of drugs was tested in rabbits, rats first and then the experiment was done in hundreds of patients under license of ethics committee of Taif University. The percentage of cure conducted was 99%, this success leads to relive of pain over millions of patients around the world and minimize the risk of surgery treatment and cost beside quick relive of disease in two to three weeks with no chance of relapse of disease again.

**Biography**

Ahmed M A Masaad has many contributions towards new drug and drug delivery system. He has membership of many scientific societies and is an Editor of PSC journal. He has published more than 20 scientific researches and has discovered new treatment for cancer of colon and skin.
