Silver diamine fluoride-a good step against caries prevalence.

Gagandeep Kaur

Baba Farid University of Health Sciences, India

Caries which involve wide age bars worldwide is still a problem despite of so many advancements in dentistry. It causes destruction of teeth and costs lots of money in its treatment. Silver Diamine Fluoride is a good solution for caries. It is a good anticariogenic material as it not only arrest caries but also prevent occurrence of new carious lesions. Studies and experiments (*In Vivo*) with silver diamine fluoride has proved it to be better than fluoride varnish Acidulated Phosphate Fluoride. It is a good step against caries prevalence.
