## Oral management following cancer therapy: A multidisciplinary care

**Mohaneesh Bhoria** and **Manu Rathee**

Pt B D Sharma University of Health Sciences, India

Post cancer therapy preventive and therapeutic strategies for dental management are essential. Usually most of the dental procedures that were postponed before and during oncologic therapy can be performed post therapy. This post-cancer therapy multidisciplinary oral management is directed at minimizing recurrence of disease, providing palliation and improving the quality of life of patients. Hence, this poster provides a pathway of multidisciplinary oral management strategies following cancer therapy.
