June 25-27, 2018 Dubai, UAE

Why do patients still catch hospital infections despite the practice of infection prevention and control programs?**Huang Wei Ling**

Medical Acupuncture and Pain Management Clinic, Brazil

Statement of the Problem: Very few publications provide sound scientific data used to determine which components are essential for Infection Prevention and Control (IPC) programs in terms of effectiveness in reducing the risk of infection. In recent years, a range of regional best practice or policy principles have been developed that address what could be considered as core components of IPC programs. However there remains a major gap in relation to the availability of international best practice principles for core components of IPC programs.

Aim: The purpose of this study was to show why patients still catch hospital infections despite IPC programs. A better understanding of a variety of theories is needed that could explain the physiopathology of diverse diseases described in the medical past history, which are usually disregarded clinically today. A broader view seems to show the necessity of seeing the patient as a whole; not only focusing on the disease in the prevention of these hospital infections.

Methods: The methodology used was a review of these theories such as those presented by Hippocrates (Natural forces within us are the true healers of disease), as well as others from oriental medicine, which explain that diseases originate from three factors: External (exposure to cold, heat, humidity, wind and dryness), internal (emotional) and dietary.

Findings: Having a broader view of the patient as a whole (Yin, Yang, Qi, blood energy and heat retention), we can understand better the formation of hospital infection which is a systemic energy reaction of our body undergoing normal hospital treatment.

Conclusion: To understand better why a patient is still catching hospital infections, despite these IPC programs, we need to broaden our view observing all emotional, environmental and dietary factors, as well as studying his energy situation at the moment of admittance identifying his risk of hospital infection.

Biography

Huang Wei Ling has completed her Graduation in Medicine in Brazil, specializing in infectious and parasitic diseases, General Practitioner, Parenteral and Enteral Medical Nutrition Therapist, Acupuncture and Pain Management Practitioner. Since 2007, she has been disseminating the knowledge of Oriental medicine, especially Traditional Chinese Medicine, in various places around the world, in the treatment of the various pathologies of the human body. She is the Owner of Medical Acupuncture and Pain Management Clinic.
