Improving global patients' outcomes with diabetes-related healthcare spending on an unsustainable trajectory, digital health and the use of big data has emerged to enable approaches that are dramatically more cost-effective and precise. The use of big data has changed the way we travel, trade and manufacture, yet healthcare is one of the last industries to fully embrace it. With growing health needs, is data now the best medicine?

**Biography**

Arjun Panesar holds a Master's in Artificial Intelligence from Imperial College London. He has a decade of experience with intelligent health systems and big data. His focus is on transforming healthcare through empowering patients through the use of innovative digital engagement, real-world experience and genomics.
