

International Conference on

Pollution Control & Sustainable Environment

April 25-26, 2016 Dubai, UAE

*Wafik Noseir**Egyptian Modern Center, Egypt*

Rainbow & pollution

Having the white light that comes from our sun, which Isaac Newton has firstly split to 7 colors using spectrum at lab or by the natural humidity on the air to show us the 7 colors of the rainbow; gives us the feeling that things are split on our planet to be natural and when combined or in other words polluted by humans in reality; makes a different color that is black, which is the color that reflects death, oil, coal, and in general pollution.

Negotiations: Pollution is unwanted, harmful stuff contaminating an environment. The race to develop clean energy is motivated by high levels of pollution that people fear are permanently damaging the earth's environment. When you hear about pollution, you're most likely hearing about chemical emissions into air or water that come from industrial processing. But pollution isn't just environmental. Anything we think of as pure can be contaminated by pollution & polluted, whether that's a lake or an idea. If a mother finds her son reading trashy magazines instead of doing his homework, she might worry about the pollution in her son's mind. Combining the 3 fundamental fields that consist of sustainable development theory: Environment & Economic & Community or in other words, Industrialization & Globalization & Population Growth will come out of a process where the input & output, of our life on the only planet that we can live on so far can be defined & obtained with NO or at least minimum pollution.

Biography

Wafik Noseir is an Environmental Engineering Consultant. He has been working in teaching industry since 1983, and has many papers in the sustainable development. He worked at Solar Energy Corporation "Honeywell", and as Petroleum Sector Planning & Follow-up Manager in 3 main companies. He worked at international companies such as "Arthur Anderson" consultant, Coca-Cola as a Projects & Environmental Manager, National Project of Egypt "Toshka" as Project Manager. He participated in many International Conferences especially the World Congress for the Environment at Washington DC, California, Portland Origin, Florida, France, Turkey, UK and Denmark, and OMICS Green Energy at Florida USA. He is a Founder & Owner of Egyptian Modern Center which is a firm for contracting & consultations, trying to find its way in a polluted environment all over the Earth.
