Can the use of chemotherapy induce more formation of metastases in patients with cancer?

Introduction: Chemotherapy is a drug developed to increase the survival of cancer patients, increasing the chances of treating and curing their diseases. However, recently I am facing so many cases of patients that have cancer diagnoses and were controlled but after using chemotherapy, cancer started to disseminate in the whole body. According to Arndt Schultz Law created in 1888 by two German researchers, the use of any kind of highly concentrated medication can harm the vital energy and, in this case, the chemotherapy is also considered a highly concentrated medication that would not cause a beneficial effect on this patient, because it was worsening the energy of this patient instead of improving it.

Methods: One case report of 68 years-old male patients with a history of colon cancer was diagnosed in 2018 through a proctosigmoidoscopy exam, after having an alteration in the color of the stools. He took out the tumor through laparoscopy surgery and after this procedure, he was submitted to chemotherapy. Before the chemotherapy, the patient did not have any metastasis diagnosed through pet scan or magnetic resonance and after beginning this treatment, it was found one metastasis in the mediastinum and one in each Lung. The metastasis was increasing in size (2mm every 2 months), even using chemotherapy. The patient went to my clinic to be evaluated from an energy point of view, using the radiesthesia procedure.

Results: All his internal massive organs were in the lowest level of energy, rated one out of eight, and the treatment of this condition using Chinese dietary counseling, auricular acupuncture with apex ear bloodletting, systemic acupuncture, moxibustion, and replenishing them using highly

diluted medications according to the theory Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine and crystal-based medications. The patient is still in treatment and the result of this treatment if the metastasis can reduce with this kind of therapy cannot be evaluated because the patient did not repeat the exams after beginning this kind of therapy. The conclusion of this study is to demonstrate that chemotherapy drugs can reduce the vital energy of cancer patients and can worsen the evolution of patients presented with this kind of diagnosis and the treatment of this weak state condition can improve the vital energy and can reduce the metastasis of cancer patients using natural forces within the patients that are the true healers of the disease, according to Hippocrates, the father of medicine.

Speaker Biography

Huang Wei Ling, born in Taiwan, raised and graduated in medicine in Brazil, specialist in infectious and parasitic diseases, a General Practitioner and Parenteral and Enteral Medical Nutrition Therapist. Once in charge of the Hospital Infection Control Service of the City of Franca's General Hospital, she was responsible for the control of all prescribed antimicrobial medication and received an award for the best paper presented at the Brazilian Hospital Infection Control Congress in 1998. Since 1997, she works with the approach and treatment of all chronic diseases in a holistic way, with treatment guided through the teachings of Traditional Chinese Medicine and Hippocrates. Researcher in the University of São Paulo, in the Ophthalmology department from 2012 to 2013. Author of the theory Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine. Author of more than 100 publications about treatment of variety of diseases rebalancing the internal energy using Hippocrates thoughts..
