November 16, 2022 | Webinar

**Emotional dentistry****Guzin Kirsaciloglu**

Ankara University Faculty of Dentistry, Turkey

Importance of the teeth is unquestionable for body-face integration and health. Teeth are part of skeletal system and they support blood system. So teeth are carrier system of the lower face. Tooth wears, broken or lost tooth cause deformation and aging in facial structure.

Dental operations provide us complete integrity in facial rejuvenation treatments or aesthetic exchange programs. Protecting the natural health is indispensable for our patients in modern day treatments. Today; dentists, aesthetical surgeons and physiotherapists are working together for FACELIFT DENTISTRY and NEUROMUSCULER DENTISTRY operations.

In my presentation, we will talk about treatment methods that are supporting information above. I will mention about how we are touching patient's both face and soul with our treatments. That's why headline of the subject is "EMOTIONAL DENTISTRY".

Dental aesthetic specialists in new treatment methods are

using MINIMAL INVASIVE method too, like other aesthetical operations. Also our patients prefer this method. I will mention about fast and painless treatment methods that will bring patients back their daily lives immediately and also how we cooperate with other specialists. At the end of the speech, I will touch upon that in which direction dental treatments will develop to protect body and mental health.

**Biography**

Guzin Kirsaciloglu has born in 1970, in Ankara. She graduated in 1992 from Ankara University Dental School. She has started her first clinic in 1993 and now she has become worldwide-recognized multi- disciplined doctor with more than 20 people including 9 providers, 5 dental assistants, 1 nurse and administrators in her team. She got her master's degree from Aesthetic Dentistry Department, New York University, School of Dentistry in 2011-2012. Her master thesis was on "Bonding Agents". She has seen the importance of dentist assistants and how supportive they are in clinics. She visited dental clinics abroad and she organized many great dental assistant training programs in 2012-2013. Numerous dental assistants benefited from these training programs.
