Marma Health Centre, India

Keywords: Symptom definition, Signals definition, Symptoms of fever, Symptoms of rising temperature

We have been hearing for centuries that fever is not a disease but a symptom. Physicians say that fever is a symptom of diseases like flu to cancer. The conservative fever definition, diagnosis and treatments are based on fever as a symptom. All the studies related to fever as a symptom of a disease have been done without knowing the purpose of the temperature of fever is. Without knowing the purpose of the temperature of fever, how can fever included in the symptom definition? Temperature between 38° to 41° centigrade can be symptom of a disease? Most of the diseases may not have a fever. Sometimes it disappears. Then, is fever a symptom of which disease? Symptom definition is the only parameter necessary for a symptom. As with any or all other definitions, symptom definition should describe the symptom scientifically. If it cannot describe clearly there is no use of a symptom definition. A symptom is a departure from normal function or feeling which is noticed only by a patient indicating the presence of disease or abnormality. One cannot be understood directly the temperature is elevated in the hypothalamus. A mechanical device is necessary to measure elevated temperature in the hypothalamus. In symptom definition fever definition can't be found. The elevation of body temperature is not included in symptom definition.

Different cause of diseases never shows the same symptoms

Different causes of diseases like virus, bacteria, fungi, venom, horror scene, horror dream never shows the same symptoms. Its actions are different and sometimes opposite. No similarities can be seen between their actions. Elevated temperature or increased temperature never makes fever or symptoms of fever. It may create hyperthermia.

None of the diseases or causes of diseases require fever as its symptom

If the mosquito bites its virus, bacteria, venom gets deposited in the body as a result according to nature and strength of viruses, bacteria, venom symptoms like itching, pain and signals like colour change, inflammation may occur. We can see the symptoms, signals and indications of the virus, bacteria, the venom which multiple or spreading or damages (disease) the body before fever emerge. Patients who have flu to cancer may not have a fever.

How can we separate symptoms of the disease and symptoms of fever and symptoms of rising temperatures?

In fever, both symptoms of disease and symptoms of fever are included. Deduct symptom of disease from total symptoms, we will get symptoms of fever.
