Full mouth reconstruction in a day with All on 4 Implants

Roshith Valiyamannil

Oral surgeon, Cambridge University, UK

Abstract

Full mouth rehabilitation with all on 6 dental implants and provisional bridge gives the patient the confidence and functionality in a single day. This presentation gives the insight to the procedure from Pre-operative assessment to planning the procedure on the CBCT scans and X-rays. Pre-planning the case with the technician. How the surgical procedure is carried out in stages on the day with intra operative impressions and transferring the information to the technician. The technician who will be on site will then fabricate the provisional bridge and is fitted on the patient. The presentation shows lights on to the potential complications and pit falls during the procedure and how to manage them. Few cases are presented for the illustration too.
