Laser in the daily practice; a step forward

It's a great time for dentists to consider an update to their practices! This can be achieved through using new technologies such as laser. Unlike traditional tools, dental lasers can improve their patients’ experiences by eliminating anesthesia, pain, bleeding and fear, as well as accelerating the healing. In this lecture, we will discuss all the laser advantages and disadvantages, and the importance of using laser in biostimulation, periodontal pocket disinfection, root canal disinfection, cavity preparation, depigmentation, gingivectomy, frenectomy, orthodontics, fibroma excision, impacted canine exposure, coagulation, tooth whitening, pain relief and periimplantitis.

Biography

Anas Karkout has been practicing Dental Laser since 2012. He has published on this subject in the Asia and the Middle East. He was a Guest Lecturer in Italy, Lebanon, United Arab of Emirates and Syria. He holds a Master’s degree in Dental Laser (Damascus University).
