

Prevention, possible treatment and control of corona virus (SARS-CoV-2)

Present days world is facing a great challenge to stop a pandemic outbreak of Coronavirus disease 2019 (COVID-19) which is caused by SARS-CoV-2. This was first reported in Wuhan, Hubei, China in December 2019, and it spread rapidly across the world, resulting in the World Health Organization announcing a global health emergency on 30 January 2020. Currently, there is no registered treatment or vaccine for the disease. In the absence of a specific treatment for this novel virus, there is an urgent need to find an alternative solution to prevent and control the replication and spread of the virus. In this situation, we should follow some guidelines or suggestions provided by the renowned health sector such as WHO. First, to increase our immunity, we have to take nutrition supplement or foods which contain immunity enhancer vitamins and minerals. Second, to control this pandemic we should practice good personal hygiene. And if we are affected, we should take some medicine as the doctor's guideline. In this article, we summarize the possible prevention, treatment and control measures of this pandemic.

Keywords: SARS-CoV-2; prevention; control; treatment
