The impact of new concepts of periodontal diseases on dental therapy

Ossama Alkhatib
Alfarabi Dental College, Saudi Arabia

The concepts of dental therapy are converted to respond aesthetic patient requests and digital smile. Tissue preservation becomes the main aim of new aesthetic dentistry for that the periodontal treatment is requested for many complicated cases because a lot of risk factors which are responsible locally and systemically are involved in the periodontal treatment and when given to the patient he should be supported by extended preventive recalls of periodontal maintenance care. The view of periodontal diseases has been becoming more clearness and understanding recently the efforts spent to put a new periodontal classification which will give us different concepts about same periodontal diseases we faced before.
