

# Depression after Surgery in Patients

Vijay Seshadri\*

Psychiatrist, Government Mental Health Centre, Hyderabad, Telangana, India

## EDITORIAL

Recovery from surgery can be time-consuming and painful. Many people are optimistic that they are on their way to getting better. Depression, on the other hand, will strike at any moment. Depression is a risk that can arise after some form of surgery. It's a dangerous illness that requires immediate care in order to find medications that can help you cope.

### Causes

Many patients who suffer from postsurgical depression should not anticipate it. Doctors don't often alert patients about it in advance.

Factors that can play a role include:

- Being down prior to surgery
- Face one's own death persistent pain responses to an anesthesia reactions to pain medicines
- Concerns about the speed of healing due to the physical and emotional burden of surgery
- Concerns over any risks
- Concerns that the surgery would not be sufficiently burden linked to treatment, travel home, financial costs, and so on
- Postoperative depression is more common after such surgeries, but it can occur after any surgery.

According to a 2016 report According to Trusted Source, there is a correlation between post-surgery depression and chronic pain sufferers.

### Symptoms of depression

Depression after surgery may be a sign of future discomfort.

- Fatigue
- Difficulty making decisions
- Problems with memory
- Eating more or less than usual
- Sleeping less or more than usual
- A loss of interest in activities
- Irritability and restlessness
- Slow movements and speech
- Feelings of guilt, anxiety, stress, or a combination
- Feelings of hopelessness or despair with no specific reason
- Thoughts of harming oneself or of suicide
- Depression also involves the risk of physical illness and delay the recovery from injury or other operation.

### When Do You Seek Assistance?

Surgical signs such as nausea and a lack of stamina usually increase as the healing continues. Depression-related symptoms seldom change after surgery. Two weeks is plenty of time to see if the signs are any better or lingering.
