

**A STUDY ON THE PROPHYLACTIC EFFICACY OF HOMOEOPATHIC PREVENTIVE MEDICINE AGAINST CHIKUNGUNYA FEVER**

***Dr. R. Rejikumar***

**ABSTRACT:**

Homoeopathy has established its supremacy in the control of infectious viral diseases. The widespread acclaim in this regard is now supported by this study. The study was conducted in the Chikungunya fever hit areas of Kerala. The genus epidemicus was selected after detailed analysis of the first cases of Chikungunya. This preventive medicine was widely distributed in the disease prevalent areas. A survey was conducted for the evaluation of prophylactic efficacy. The study showed a very high significant effect of Homoeopathic medicine in the prevention of Chikungunya fever.

Chikungunya is not considered to be fatal. However, in 2005-2006, 200 deaths have been associated with chikungunya on Réunion island and a widespread outbreak in Kerala. The symptoms of Chikungunya (also called as Chicken Guinea) include fever which can reach 39°C, (102.2 °F) a petechial or maculopapular rash usually involving the limbs and trunk, and arthralgia or arthritis affecting multiple joints which can be debilitating. There can also be headache, conjunctival infection and slight photophobia.

**Biography:**

Dr. R. Rejikumar is an Medical Student at Andalas University Fakultas Kedokteran Universitas Andalas Padang, West Sumatra, Indonesia.
