

About Anatomy and Physiology: Current Research

Kate Jones^{*}

Managing Editor, Anatomy and Physiology; Current Research, Brussels, Belgium

ABOUT JOURNAL

From this year onwards we will present the July issue of Anatomy and Physiology: Current Research with a short Editorial that will feature a portion of the accomplishments of the earlier year. In the first place, we might want to commend the ongoing achievement of the Journal. As fits the transmit of the Journal and with regards to our strapline-Structure, Function, Development, and Evolution, we keep on distributing amazing papers across the anatomical sciences. Our point, as usual, is to distribute papers that give critical novel anatomical bits of knowledge and we are especially quick to get entries in the accompanying regions.

- Cell biology and tissue architecture
- Comparative functional morphology
- Developmental biology
- Evolutionary developmental biology
- Evolutionary morphology
- Functional human anatomy
- Integrative vertebrate paleontology

- Methodological innovations in anatomical research
- Musculoskeletal system
- Neuroanatomy and neurodegeneration
- Significant advances in anatomy education

In 2014-2020, we received a record number of new submissions, representing a year-on-year increase which is a further indication of the strength of the Journal. We are also dedicated to processing all of our submissions as professionally and as rapidly as possible. Currently, our average time from submission to the first decision is 14 days, with our average time to a final decision being 21 days. Following acceptance, our average time to publication online is 35 days. These times are very competitive with, and often better than, many other journals.

Secondly, we would like to celebrate the breadth and quality of the papers that we have published. Indeed, an ongoing pleasure of reading the Journal is not only the exciting results described in the paper but also the quality and beauty of the images that our authors generate.
