

Ankle Fusion Surgery

Liu Xen^{*}

Managing Editor, Orthopedic & Muscular System: Current Research, Belgium

Figure 1: Lower leg medical procedure, before lower leg medical procedure and what's in store after lower leg medical procedure, the lower leg zone incorporates the joints and ligaments that interface the lower leg to the foot. The lower leg permits side to side developments and up-down developments of the foot.

Lower leg combination medical procedure is needed for seriously harmed lower leg joints where the bones should be melded. During this surgery, you will be regulated an overall sedative to put your oblivious all through the medical procedure. Your specialist will at that point make a cut in your lower leg to have the option to chip

away at the bones. Your specialist will at that point roughen the closures of the harmed bones and secure them along with metal plates and screws. After the bones have been effectively combined, your specialist will at that point go through join or staples to close the layers of skin and muscles around your lower leg and foot.
