

Biophysical Cell Therapy Painless and Without Chemicals for People and Cattle That Promises Induction Therapy

Karl Angele*

Department of Biology Education and Animal Health, University of Novi Sad, Novi Sad, Germany

ABSTRACT

It is a biophysical treatment method with pulsating, high-energy, electromagnetic induction fields. These are from an Induction device generates and acts on the outside via a treatment loop Disease field, i.e. "Non-Invasive", i.e. without the body with any fabrics or to touch instruments. So besides the energy it becomes pulsating Induction fields are not entered on or into the body. And let's be honest, that's what we want but all: a form of treatment without chemicals and therefore without side effects! These high-energy, pulsating induction fields stimulate the sick cells, theirs to optimize the transport of substances through the membranes again. Because sick cells draw are characterized by a membrane tension (membrane potential) that is too low. This will make the Substance transport through the membrane systems of the cell is severely restricted. The Induction fields increase and stabilize the cell membrane voltage sustainably and indirectly help the cells to restore their mass transport through the membranes normalize. This means that the cells return carbon dioxide, pollutants and waste materials to the outside world and the valuable nutrients such as glucose, vitamins and oxygen can transport inside. As a result, the cells regenerate faster and become healthy and thus also the corresponding tissue or the affected organ. The symptoms of the disease disappear and the rehabilitation, i.e. the restoration the body functions can be regained.

Keywords: Rehabilitation; Frozen shoulder; Pain

DESCRIPTION

Latest findings from scientific studies (May 2018) by the Paracelsus Institute Salzburg not only confirm the optimization of the mass transport through the membranes, but also made a significant optimization of the metabolism in the cell firmly! So one can say that the energy of the induction fields extends into the gene activation of specific enzymes that were responsible for the emergence of the clinical picture, because its concentration and its presentation before Location in the cell were too small for a long time. An example of this is the "Frozen Shoulder", a painful calcium deposit on the shoulder tendon that causes Many induction applications can be reversed because of the Metabolic processes to dissolve the lime substance are activated again. This one was not only able to experience the rehabilitation process firsthand, but also learned about it heard of many similarly successful induction treatments.

And if lately in connection with various diseases always More often the talk of "mitochondrial therapy" is, so today we can say that with the help of the pulsating induction field energy the optimization of the material transport and

metabolism also on the mitochondrial membranes and in the mitochondria themselves can be realized: The energy supply (ATP) for the cell is also optimized, because the inhaled oxygen passes more easily through the mitochondrial membranes and with the hydrogen present in the mitochondria faster and more efficiently can react. The result is a larger amount of ATP available to the cell stands. This is particularly important for the muscle cells in competitive sports in humans and Animal.

DISCUSSION

It is therefore a pure cell therapy in the sense of helping self-healing. And since 80% of all clinical pictures can be traced back to sick cells, can cure a variety of different diseases with it:

Injuries, burns, broken bones, joint and spine problems, Inflammation, eczema, bruises, strains, torn ligaments and of course Organ diseases (inflammation of the intestines, stomach lining or pancreas) etc. This completely painless form of therapy can be used in humans and animals because whose cells work in principle in the same way. In addition, induction therapy is recognized as an immune and pain therapy of all kinds (e.g. for back pain and migraine pain) - and all without chemicals!

Attempted treatment of severe osteoarthritis in female elephant RANI (60 years) Hoof roll treatment for mare CARIBA (18 years) Actually, CARIBA should already in spring 2016, after

years of cortisone treatments, be euthanized because they are very bad with their severe roll inflammation difficult to walk. Then the owner heard of a new form of therapy and called me on. We treated CARIBA 10 times on the hoof with an interval of 2-3 days. After almost 3 Years ago, the owner recently called me and told me that CARIBA has been there ever since went well and she is ridden daily by her two daughters. She was grateful to young happy! So much for the sustainability of this ingenious, alternative, chemical and painless form of therapy. Incidentally, with my frozen shoulder, I am in my 11th year without any more pain Follow-up treatment and live without medication for 10 years.
