

## Brief note on Editorial choice

Salmah Ismail\*

*Department in Faculty of Science of University Malaya*

### Editorial Choice

It has always been the policy of the Editorial Board of the journal Applied Microbiology Open access to accept papers on the borderline between immunology, microbiology, medical microbiology, agricultural microbiology etc. Microbiology aspects have always been an important tool for investigation in these two fields. Both microbes research and applied microbiology are going through a period of rapid development, and it is felt that neither of them, nor—as a matter of fact—microbiology, can satisfactorily progress without intimate knowledge of the developments in the neighbouring fields.

We also feel that a need exists for additional facilities for the publication of the results in microbes and its physical nature research, especially in their relation to protection.

Therefore, it has been resolved that papers on these topics will be welcome in our Journal; and in order to accentuate the importance we attribute to the cultivation of the two neighbouring fields.

Applied Microbiology functions on principles of scientific excellence, publication ethics and transparency. It makes mediatory

that every article is submitted only through the online manuscript submission and review system managed by experienced reviewers with certified qualification. The professional bodies have given guidelines related to publication ethics and conflict of interests.

As our readers know, our journal applied microbiology open access is the most preferred and highly accessed journal in the field of microbes and microbial developments. The Journal is indexed in Scopus, Geneva, publons and Scholar among many other reputed scientific databases. At many instances members of the editorial board also prefer to submit their articles. Such practice is common in other reputed specialty Journals. In fact, J-Amoa encourages editorial board members to actively contribute. However, no special privileges are given to anyone. All scientific manuscripts including editorials are subjected to peer review. Our journal follows double blind peer review process where identity of authors and reviewers is not revealed to each other. The review generally involves two to six subject experts. The editorial team consisting of associate editors and assistant editors are involved in the entire article cycle starting from submission to final recommendation. The entire review process is carefully structured so as to minimize possibility of bias.
