ABSTRACT

The issue of diversity democracy must incorporate the elements that the humanity issue depends on. Recently the same politicoeconomic coming up with phases of Econorelativism to Econopositivism couple with Sociorelativism to Sociopositivism as well as Politicorelativism to Politicopositivism to take into consideration while implementation would be taking place with appropriate guiding principle. It also constitutes with appropriate justification. Besides this, as the realization of will-wish of humanity largely depend on ecological constituents and natural resources couple with the way conservational and its utilization taking hold, developing additional major guideline for the realization of its protectional delivery as well as exceptionally to realize longevity sustaining the constituents as if obliged. In line with taking into consideration of the above idea, various newly developed theories incorporated with in this study more appropriately with its own principles and philosophical elements. For the same purpose, taking into embracing the protection and safeguarding of the fate of the ahead future generation directly aligning with sustaining protection and longevity of the stated resources. As the protection of the fate of future generation partly depends of ecological suitability as well as the fate protection taking hold by the predecessor generations coming up with justifiably taking hold theories and perspectives as if essentially grateful. For the same instance, in the area taking into embraced two major perspectives have been developed. Among those, the first one is Ecolorelativism and the second as if Ecolopositivism.

Keywords: Ecolorelativism, Ecolopositivism, Diversity Democracy, Sustainability

INTRODUCTION

Diversity democracy is a type of democracy that aimed to come up with recognition, respect, appreciation, acceptance towards any diversity and diverse identity elsewhere exist without any discrimination and partiality taking hold as if building democratic government and governance for both the governed and governor within the statehood formed and institutionalization of nation

building taking into consideration. Besides, taking into consideration working towards the reality exist among any known community as if also among the consideration given while diversity and diversity taking hold couple with prevalence of human right (Meseret Bekele, 2020). In such case, while government structural framing as well as built at country level among different countries taking holding the above ideal of the

reality context must be issued. Alongside with such, what has been must consideration given is the issue of humanity as well as the case of the conservation in line with the utilization of ecological constituents as natural human made must follow up to conserve the natural resources and any environmental constituents as well even substitute function delivery to sustain the non renewable specially making innovation and invention acts that can might compliment or substitute the utilization of early exist natural resources and stated environmental constituents as if must be thinking up on essentially obliged. In such a way consideration of ecological and natural resources in line with the reality exist among any community elsewhere across the globe inclusively incorporating into among the elements taking into embrace with in diversity democracy as politicoeconomic ideology that variably to make the existence of

humanity and working for the fate of future generation taking holding must be integrated into it. The above ideal also must be consideration given the fate and the natural right of any ahead generation as if consideration of any natural right to mean not only biodiversity but also sustaining ahead degeneration must be taking into embracing (13Meseret Bekele, 2021). For the realization of such ecological handlement as if changing the unwisely utilization of any ecological constituents as if obliged since the instance intensely hit the natural right of any human species even including the survival context of humanity on earth (Ibid). For such case in aggregate utilization of the reality on the ground among any country to general coming up with diversity and diverse identity taking holding also might favorability big ideal in diversity democracy as well as other theories in the area of identity and diverse identity. For the fate of presently exist human being based on the context of communally exist diversity couple reality on the ground of any kind as well as the reality exist among the members of the same or other respective community as personal based identity that to be consideration given as human right protection as if besides the latter essentiality the ability and capacity exist among any member encouragingly to come up with new concept, new idea to realize the above fate of the generation and beyond taking hold as if mandatorily (11Meseret Bekele, 2020).

As aforementioned above, live is not issue without consideration of ecological constitutes as well as any natural resources not only for the generation timely exist but also for the generation ahead any time could come restrictly across the globe. In such a way issue of natural resources and its utilization in compromising way as well as trailing wisely as if must be consideration given as negatively impacting the live and aliving of sustaining not only the benefit of the generation in subsequent but also the generational responsibility as well as the fate of the generation of any and beyond to humankind context. Timely thinking on the way conservational and preservational taking holding as well as thinking for the fate of humanity in the future based on the fate building of humanity context to sustain aliving of human species to not lead to future in uncertainty. In such case humanity as well as human species must taking into care what the globe have had otherwise what has been uncompromised sometime in the past and present as if negatively hitting the way humanity issue as well as existence taking holding might be consideration giving as if another question undoubtfully all should think about (13Meseret Bekele, 2021).

In such a way, the two perspectives that developed with in this study in the area of creative development aimed to incorporate separately the issue of both ecological conservation and utilization of natural resources as well as other environmental constituents as humanity sustaining based on it in line with taking into consideration with the right and fate of future generation as the natural right both must consideration given alongside. For the same case this manuscript coming up with the following study objectives i) to develop perspectives in the area of preservation and conservation of ecological constitutes ii) to justify well the developed perspectives in the area of wisely utilization of natural resources as well as ecological area of context ii) to reasonably relationship building with the elements taking holding into diversity democracy

RESULT AND DISCUSSION

Overview on the ecological perspectives

Recently various theories, perspectives as well as beyond as if developed in the area of diversity democracy couple with its own phases for the aptness of implementation of this politicoeconomic ideology. In such case diversity handling in the area of various elements that humanity will-wish realization depends as if must be incorporated into the philosophy of diversity and diverse identity couple with the one that taking into consideration in the same ideology of the case of the reality on the ground and others exceptionally any identity couple with human right and prevalence of rule of law. In such case issue of diversity and diverse identity should usually obliged to incorporate what humanity requires to sustain its livelihood specially for the future fate of humanity and human species to not to come to be extinct. In other words, issue of diversity democracy as if must be consideration given the area of the right and fate of the protection of the future generation without any discrimination. In such a way issue consideration giving with in ecological terms as well as wisely utilization of its constituents inclusively to indoctrinate based on principle-ideology as if with independent perspective based with its own theories as if must be seen as having its own guideline as well as principles and philosophical terminological understandings. In such a way issue of mentioning at least two theories, Ecolorelativism as well as Ecolopositivism taking into account within this study as subsequently ahead discussion of both perspectives taking place for the purpose of the utilization inclusively with in diversity democracy.

Ecolorelativism

Theory of Ecolorelativism has been developed based on the ideal of the dependence of the livelihood of human being on the ecological elements and constituents as if ecology must be consideration given with the existence of appropriate preservation of any ecological constituents including biodiversity as well as else exist taking into consideration alongside with the reality on the ground among any community. In other instances, the ideals and to be designed plan to conserve and preserve the stated reality in relation to consideration and preservation of ecological constitutes as well as beyond simply not only inline and in relation to that of the relativism based taking holding the right of the presently exist diversity and diverse identity in relation to the stated reality based human right taking into consideration but also in relation to the preservation of the natural right and the fate of the future generation as the whole subsequently could appear ahead of the timely generation that must consideration given of the stated responsibility as the big reality taking holding global obligation. As to such, as human beings family lineage as well as family kinship building in sequence within the same family and beyond taking holding unquestionable as if the case of thinking for the future ahead generation as well as conservation taking holding for the subsequently to come of the same generation ahead for the aim of live-longevity the generational responsibility towards humanity for human species as totally depend on the way treatment given and realization of the aim of the treatment to

ecological as well as any environmental constituents, Ecolorelativism coming up with the ideal and philosophical context treating self and what belongs to others as the family ahead building in sequence without interruption taking place. While family consideration given not only human beings ahead born and grow and to become generation by reproducing self but ecological and environmental constituents totally treating not only for the utilization of ahead to come family but also the one that stated as ecological constituents and environmental constituents as if consideration given as a family. Relative family-hood mentioning to that of environmental constituents nearby to us as if possible.

In case of such not only issuing simply preservation for the timely income generation as if never be hampering live issue of the green plants as well as beyond biodiversity must be taking account as the future generation taking holding based the existence as well as pro-existence taking holding equally of consideration of various accomplishments as well as plant breeding as among family based issue consideration with human being. This is because as the family members and beyond supporting each as while consideration of human beings as if consideration of dependability of humanity on such ecological constituents to mean that issue of not only familiarity with regard to the dependence of human live on such ecological constituents but also the dependability of family-hood taking holding as the case of biodiversity, natural resources as well as other constituents that exist and would be created ahead that can bear support towards the live longing responsibility with regard to the delivery of sustainability to the aliving of human creature on earth. In such case Ecolorelativism states that not only support delivery for human beings that at the time exist but also the ideal target to combat and work on the save the extinction of human species due to negative impact that might resulted due ill utilization of natural resources and ecological constituents as if mandatorily managing such beginning from now on wards as if taking into consideration as the major principle of the perspective.

For such Econorelativism advocates as the big own ideal and principle first immediate commission or family-hood between the past, present and future generation to easily taking into consideration the responsibility of handling ecological constituents to make support each other by wisely utilizing and value add upping as if obliged. In other case, the same family-hood building not only between the subsequent generations but also among the human species and other ecological and environmental constituents. This because as live depend on the same ecological and environmental constituents and big support to sustain live and alive including the way livelihood leading taking holding coming from those constituents as if the case of family-hood or family relative kinship based building with those diversity as if must be consideration given. In such case conservational issue as well as thinking for the ahead generation as a big family needing inheritance as if among the consideration by human beings while consideration of ecological and environmental constituents taking holding taking place. As has been stated, for instance, if forest deteriorated the impact lead to deterioration of biodiversity, water, minerals and other natural resources that totally or partially lead to

deterioration of livelihood leading for human beings since livelihood leading sustain only if those ecological and environmental constituents essentially conserved and save. For such not only issuing the timely livelihood leading by using those ecological and environmental constituents but also wisely utilization, substituting project implementation, conservation and preservation of all as if must be well done and taking into account even by considering those constituents as the relativity building that by building the norm of the one belongs to use and nearby to us must be saved from deterioration as any entity that we have commonly or personally. As ecological diversity constitutes from small part of elements to the large as if protecting its diversity must be issued according to the ideal of this perspective. Its diversity must be protected, appreciated legally consideration given to not be hampered as if the case issuing the fair and wise utilization by taking holding the right and fate of all across the globe equally consideration given parallel existence as well as a generation upholding fate and right vertically to the generations ahead.

Ecolopositivism

This perspectives states that issue of consideration giving towards ahead generation as well as similarly towards ecological constituents since the former depend on the latter must built on positive perceptual upholding as positivism and positivity must be issued in way taking holding the way familiarity with the generation ahead as well as positive outlook consideration given towards the ecological, natural resources as well as other environmental constituents. As such way, building positivity and positivism outlook as positivity towards ecological constituents as if must be consideration given. In other words, as thinking positivity as well as positivity bearing benefit taking holding for the future generation essentially matter any awareness creation and educational delivery in the area of positive attitude and aptitude development as if grateful begin from any time based on its appropriateness. Positivism and positivism must be built towards ecological and environmental constituents as well towards wisely utilization of the same area as if also waying the lane towards innovation as well as invention acts development and building up to compliment, supplement or substitute the utilization of the naturally exist ecological and environmental constituents. As to such if issues towards positivity and positivism building taking holding indebted and fully realized in successful way to the way human beings utilize and conserve the same naturally exist might be in safely way largely coming up with new additional manmade purposively to totally conserve any natural resources upcoming substituting the utilization of any environmental or ecologically constituents as if the opportunity coming up with such complimentary as well as substitutable or supplementary resources resulted from human actions might be continually exist. For such positivism and positivity taking holding to mean variably inheritance building for the future generation for what the future generations needs and requires to sustain livelihood and simply to lead aliving and livelihood. Generation must positively taking holding generation responsibility and obligation to sustain what another generation want and requires to lead livelihood as if alive sustaining become challenging if the consideration of positively

taking holding the benefit as well as the sustenance of the benefit taking holding for the generation ahead in subsequence. In such a way any resultant consequence never hit the positivity towards the ecological constituents around us as the any generation as the case hit also the generation responsibility and global consideration taking hold global obligation thinking and positive outlook and attitude having for the generation ahead as well as the humanity issue of consideration giving to sustain more for millennia as well as even beyond. As to such positivity towards humanity couple with positivity towards what the existence of humanity depend up and successively requires to sustain the livelihood existence of human creature on earth in sustainable way as well as to sustain self existence of humanity and human beings. For the sake sustainability of humanity and human creature on earth in positive way working for the protection of those elements that humanity and human beings largely requires for the same sustaining the subsequent generations without interruption. The rich diversity of ecological constituents must be positivity seen and working up on in practical way by any generations as if taking holding inheritance taking into embracing with any hamperance and deterioration including the natural resources underground. Other severe extinction of live on earth might followed with in short or long period of time period.

SUMMARY AND CONCLUSION

Diversity democracy taking hold various economic as well as social constituents couple with the issue of well handling of political governance with its own phases. In such a way variably phases of Econorelativism to Econopositivism couple with Sociorelativism to Sociopositivism as well as Politicorelativism to Politicopositivism taking holding with appropriate justification taking into consideration as the newly handled diversity and diverse area of philosophizing its development taking into consideration given. As aforementioned here above, another area of relativism and positivism as if coming upping taking place with appropriately handled justification in precise way. As to such in all areas of diversity democracy couple with area of consideration given theories and perspectives as a protocol to be holded while consideration taking into place the implementation of the activities of phases of the same ideology additionally Ecolorelativism as well as Ecolopositivism as if taking into place within this manuscript.
