

Emerging Clinical and Experimental Cardiology

Alexandra Lucas*

University of Florida, Section Head Vascular Research

EDITORIAL NOTE

Cardiology is a branch of medicine that deals with the disorders of the heart as well as some parts of the circulatory system. The field includes medical diagnosis and treatment of congenital heart defects, coronary artery disease, heart failure, valvular heart disease and electrophysiology.

Physicians who specialize in this field of medicine are called cardiologists, a specialty of internal medicine. Pediatric cardiologists are pediatricians who specialize in cardiology. Physicians who specialize in cardiac surgery are called cardiothoracic surgeons or cardiac surgeons, a specialty of general surgery. Although the cardiovascular system is inextricably linked to blood, cardiology is relatively unconcerned with hematology and its diseases. Some obvious exceptions that affect the function of the heart would be blood tests (electrolyte disturbances, troponins), decreased oxygen carrying capacity (anemia, hypovolemic shock), and coagulopathies.

Journal of Clinical & Experimental Cardiology is a broad based journal that aims to publish the most exciting researches and clinical experiences related to cardiology. Journal of Clinical & Experimental Cardiology brings articles in all areas related to Clinical Cardiology, Cardiovascular Diseases, Pediatric Cardiology, Atherosclerosis, Sudden Cardiac Arrest, Myocardial Infarction, Heart Failure, Echocardiography, Congenital Heart Diseases, Stroke, Cardiac Biomarkers, Cardiac Surgery, Heart Diseases, Angiogenesis, Heart Attack, Open Heart Surgery, Bypass Surgery, Ablation Surgery, Cardiomyopathy, Cardiac Arrest, Cardiac Catheterization, Invasive Cardiology and Cardiac Electrophysiology.

It also includes Coronary artery disease, Cardiac stem cells, Hypertension and Heart transplantation. It basically aims to scatter the requirements of research, teaching and reference aspects. Clinical Practitioners, medical/ health practitioners, students, professionals and researchers and professional bodies and institutions are its main target audience. No matter how prestigious or popular; it increases the visibility and impact of published work. It increases convenience, reach, and retrieval power. Free online literature software facilitates full-text searching, indexing, mining, summarizing, translating, querying, linking, recommending, alerting, "mash-ups" and other forms of processing and analysis.

The current volume 11, Issue 2 various aspects of Cardiology were discussed by the authors from different parts of the world. Samer Ellahham discussed the review article on Diabetes and its associated cardiovascular complications in the Arabian Gulf: Challenges and Opportunities[1].

Samer Ellahham, Hanan Sheikh Ibrahim and Mariam Hassan discussed the review article on Transcatheter Aortic Valve Replacement Patient Selection: A Frailty-Centered Approach [2].
