

Exaggerating New Trends in Patient Safety and Nursing Education

Bawa Muhammad Tawaio

Mongolia

Abstract:

The postnatal period is a critical phase in the lives of mothers and new born babies. Most maternal and infant deaths occur during this time. Yet, this is the most neglected period for the provision of quality care (WHO 2013). The objective of the study was to review the factors that influence the utilization of postnatal care in Jahi Primary Health Centre, Abuja. The information obtained from the study would be useful to the researcher, the health workers, the mothers and the hospital administration to improve its utilisation. The study was literature based. Questionnaire was used for data collection. A descriptive study was carried out on 200 eligible nursing mothers. Convenience sampling strategy was utilized to select participants. Data was analyzed and interpreted statistically using percentage in frequency distribution table. Findings: 130(65%) were aware of PNC of which 78(65%) defined PNC as services for child immunization. 103(79.2%) said mother should attend PNC once at six weeks and 15(18.7%) did not think it was necessary because they were not ill. Permission for PNC and distance to the hospital were not problems to majority. It is recommended that health workers should strengthen provision of information, education and communication about PNC to mothers and provide PNC at convenient hours in a comprehensive non-fragmented manner, with privacy, respect and minimal waiting time. The study concluded that inadequate knowledge of postnatal services and inadequate provision of PNC by health providers are the major barriers that hinders women from accessing PNC in Jahi PHC.

Biography:

Bawa-Muhammad Taiwo is a registered Nurse/Midwife with Nigeria NMCN. She received her BNSc from National Open University of Nigeria. She is a staff of Mabushi PHC, Abuja. She is the vice chairman of Forum for Local Government Nurses and Midwives, AMAC, Nigeria. She was the nurse in charge of Maternity services in Jahi PHC, Abuja from 2012 July till September 2017 and presently the Nurse/Midwife in charge of Maternity services including sexual and reproductive health services in Mabushi PHC in Abuja. Her current research study is on Factors Influencing Utilization of Reproductive Health Services by Adolescents in Abuja.
