Now a day the calamities are more destructive element in the world. It destroys the life, crops, houses, trees, and many other things. The Area which is affected by it goes not less than 20 years back. The pollution of the Air, Water, Soils, Replacement of minerals, occupies the land, Day by day less number of birds, Animals and aquatic creatures, Manufacture of synthetic items, Chemicals and management of plants (trees) are reason behind it. God has given us every things to clean the environment for example we can take birds Vulture, Eagle, Kite, Wood Piker, Ravan, crow and many others birds. Now we cannot find many kinds of birds. Carnivorous animals like jackal, tiger, fox, wolf, dogs and many others animals have disappeared from the world. Herbivorous animals like rabbit, Elephant, horse, ass (Donkey), camels. In herbarium, variety of grass, variety of plants and variety of Trees. It is the time to know the things and do the research on them to clean the earth. Because every species have different type of food, living habits, digestion, bile, body, structure, sound, smell, hairs, leaf, skin, saliva, mouth, nose, breath, and different type (Aspiration), By this things the clean the environment we need all this species.

(1) We can take care of birds and make space for small birds at our homes. And use natural pesticide instead of chemicals to protect the bees, insects, birds, earth worm and wild animals.

(2) If we will put some fishes like mangur, shinghi, garye, patya, in our septic tank the fish utilize night soil and its reduce methane and

carbon mono oxide produce by our toilet tanks, cow done gas tank and other tank also. I experimented on this and found success.

(3) If we will know the type of trees, plants and grasses who can survive in difficult position and absorb many kinds of chemical elements this kind of trees we can put near the industries waste.

(4) We can put tree like Plam, Date, Coconet, and other kind of tree in the bank of sea to control the force of water, air and cool the air.

(5) We must develop technology to convert carbon mono oxides in fuel.

(6) Every part of India Se sham Tree is drying by silver virus produce by Ants. I Experimented on this Topic and found useful So my advice to all people Who has sesham Tree they can use useless Mobil at the trunk (Dhar) then the aunt cannot go the upper side of the Tree and all type of aunt disappear from the tree I use this method on sesham, Lichi Mango, and other Tree also and found very effective. We can use this method to save the every kind of tree.

(7) For earth quake we are utilizing the minerals, soils, stones, for our homes, industries by carry one place to another place experiments of many kinds of distractive arms in the air, water and under the soil by this the balance of eco system disturb to some extent.

(8) By making homes, industries, and in the bank of river mostly in heels area is the reason for calamities.
