

## Market Analysis on Robotics and Artificial Intelligence 2020

Dr. Jing Xiao

LONGDOM Conferences will offer delegates the chance to be completely informed on the present circumstance inside the organic framework and increase a report on the most recent improvements regarding specialized arrangement and financing.

We are pleased and honored in extending you an earnest invitation to attend the Future of Artificial Intelligence, Automation & Robotics. It is focusing on "Advancement on Robotics and Artificial Intelligence" to develop and explore knowledge among the robotics. Providing the right stage to present thought-provoking Keynote talks, Plenary sessions, Discussion Panels, B2B Meetings, Poster symposia, Video Presentations, and Workshops.

Euro Artificial Intelligence 2020 foresees over 200 participants from 7 continents with revolutionary subjects, discussions, and expositions. This will be marvelous viability for the researchers, students and the delegates from Universities and Institutes to intermingle with the world-class Scientists, speakers, technicians, technical Practitioners and Industry Professionals working in the field of Artificial intelligence and Robotics.

The global humanoid robot market can be segmented on the basis of component, application, and region. Based on component, the humanoid robot market can be divided into hardware and software. The hardware segment of the humanoid robot market can be further classified into sensor, actuator, controller, power source, and others. Rise in adoption of artificial intelligence algorithms in humanoid robots to boost robots' performance is expected to a primary reason for the leading market share of the software segment. In terms of application, the humanoid robot market can be categorized into personal assistance, education, search & rescue, entertainment, research & space exploration, public relations, and others. Increase in implementation of robots in retail outlets to enhance customer experience is expected to push the revenues of public relations segment of the humanoid robot market. Geographically, the global humanoid robot market can be segmented into North America, Europe, Middle East & Africa, Asia Pacific, and South America. Asia Pacific is expected to contribute a substantial revenue share to the humanoid robot market during the forecast period owing to growing geriatric population in countries such as China, India, and Japan.

Artificial Intelligence (AI) Market, by Geography
