### Commentary

Functional medicine or Oligoterapia has its bases in the works of Gabriel Bertrand and Jacques Ménètrier, initiated in the late 19th century and in the early decades of the 20th century. Gabriel Bertrand of the Pasteur Institute of Paris demonstrated the importance of minerals as biocatalysts of enzyme reactions. In the Scientific Congress of 1912, for some of these minerals have given the name "trace elements", as they are found in tiny quantities in living organisms, animals and plants.

Jacques Ménètrier uses any metallic substance, calculates how much is 1 (one) mol of the substance, through a simple calculation known in chemistry and quantifies mol of the substance and divides by 2. The result of the molarity is therefore  $\frac{1}{2}$  mol – half the molarity. With this discovery, Ménètrier achieved perfectly and, without the aid of a frequency meter, the fundamental frequency of metals or fundamental wave of the element or basic wave; That is, it is at this frequency that metallic substances vibrate. Until today, nobody knows how Ménètrier got this enorme done.

From this, the manufacturing model of all the oligoterápicas remedies are made in the molds of Ménètrier, in which it dilutes the substance by half its molarity, causing it to remain (almost nothing, "in other words, it is only the have no idea fraction of the substance ( $\frac{1}{2}$  mol), taking away any risk of adverse reaction. The word oligoterapia means subtle treatment with small doses, great effects [1].

The blockage of vital energy originating from contamination and constant stress, are imbalances that harm and provoke the emergence of diseases. Quantum medicine is the branch of the well-known science of physicists' optical experts, whose primary purpose is to restore the organism's energetic equilibrium through the properties of the water, called nematic. This property allows the water to "copy" the three-dimensional information of the substance (raw material) or electromagnetic field that was there. The adjustment of the "copy" of the molecules designated for specific functions in the organism is given through vibrational information contained in the frequency modulators and inductors of herbal medicine, vitamins, minerals and trace elements and floral, already ready for use, dispensing and any manipulation process [2].

Vibrational information has the function of induce the enzyme reaction and modulate the type and quantity of the raw materials according to the body's biochemical need for removal of free radicals. Enzymes are proteins present in the intra and extracellular membrane that catalyse (accelerate) the unspontaneous and very slow chemical reactions. For enterdermos as the energy imbalance occurs in the organism, it is necessary to understand that the body is a machine in permanent production.

During this production process, failures may arise, either in the arrival of raw material (vitamins, minerals, trace elements, amino acids, essential fatty acids, and hormones), whether in the integration of all and any system that composes the machine. There is a fundamental harmony between these systems. These enfrenagens are the systems: neuroendocrine, psychic and immune. Any distorted vibrational information from the intracellular medium to the extracellular, in some way, activates the defense mechanism that responds fighting back the intruder. It is important to emphasize that the disease manifests itself when the defence system does not recognise the intruder.

For example, food intolerance increases the chances of presenting repeating cystitis; Or cases of depression that favor the emergence of recurring infections, since production of toxic agents or failure in the psychic system is consequently in changes in the immune system. Therefore, quantum medicine acts by biophysical action by stimulating the low frequency electromagnetic field, in which information is provided through vibration resonance, in order to promote the energetic rebalance when realigning the molecules.
