ABSTRACT

The study coming up with new area of perspective development to equally utilize at international concern while international relations taking hold among states or countries of the members of the United Nations. In such a way area of consideration of the reality exist among any country among domestically exist diversity and diverse identity having communities and the way that diversity and diverse identity taking into consideration right based protection must become a concern at international relation. The issue of handlement of diversity and diverse identity must be internationalized with the issue of internationalization or universalization of human right protection priority giving. In other words, in sort of any with regard to internationalization and universalization of the aforementioned area of consideration while the state holders of the political elites coming to the front for international relation that revolve around any diverse entity of consideration as if taking into account embracing obliged without marginalization and ignorance with more right based advocacy taking holding for all diversity and diverse identity having of all. In such case, the following perspectives exclusively coming to being as Sociopolitics, Econopolitics, Ecolopolitics as well as Socio-economicpolitics.

Keywords: Sociopolitics; Econopolitics; Ecolopolitics; Socio-economicpolitics

INTRODUCTION

Diversity democracy has been recently developed as a major determinant of future global events as a new politicoeconomic ideology. It states that any diversity and diverse identity should be recognition given equally with brotherhood communication and interconnection as well interaction building in a positive way with positive attitude to each as to that of the diverse having identity of any as well as the governing elites as if must consideration as the representative of not only to the state but to all diverse having community of any including taking into consideration to all of the members of diverse having communities. As has been indicated here above global interconnection, intercommunication has been among the arena that recently taking hold at the global level. Interconnection as if obliged and compulsory since peace matter all developments, harmonized livelihood leading, health and health service delivery, modernity time educational and other facility distribution, economic engagement modernization,

mechanization as well as others area of consideration taking hold [1].

With this regard, mechanisms of interconnection and intercommunication become vary considerably. In such sense among the major determinants as if this paper come up with issues of diversity and diverse identity handlement as well as the taking into consideration of the universalization of human right concern [2]. This is to mean that issue of interconnection as well as intercommunication on the area of international relation as if the ground work must be work upon the incorporation of diversity and diverse identity as the elements and mechanisms to put the ground for the development of international relation since the trend and pattern several times requires various elements taking into consideration for its dynamism. Dynamism must be equally consideration given with modernization of the globalization more in intensely way as well as paving the lane towards the fully realization of the preservation and protection of human right for the community elsewhere exist including the consideration of all members of the respective community [3].

For the sake of simplicity of the international relation building towards harmonized global diverse having communities as well as the respect of diversity and diverse identity couple with the preservation of human and democratic right (Ibid) as if additional perspectives by add upping to the formerly exist to take hold while international relation at all level taking into place among sovereign countries and beyond. For the sake of such the following study objectives taking into consideration with in this study. Among such i) to develop new perspectives that can be utilized with critical theories to handle more the issue of marginalized diverse communities due to their identity having diverse from same others ii) to justify the developed theories well iii) to analyze the developed theories in relation to the building of international relation [4].

RESULT AND DISCUSSION

Overview on the Developed Theories

In the area of diverse identity theory that equally recognition given as the guiding principle and among the determinants of the building interconnection, interaction, intercommunication for the purpose of global based international relation among countries or states that taking place for the issue of handling the universalization of human right of diversity democracy as if a number of issue must be issued. Among such usually must be consideration given as if the implementation of such intercommunication in line with the handling of diversity as to the way taking place at domestic level. Issue of diverse having reality taking into consideration while dealing with international relation among themselves. This is because if the reality among diverse communities as if not treated well while discussion taking place to realize the building international relation taking consideration human right issue as well universalization of human right might be under question. Inevitably human right must be universalized according to the ideal of diversity democracy. Issue of such must be taking into place within those developed theories with in this study. As to such minorly or majorly taking into consideration the indigenously exist variable and diverse social actions, socialization as well as economic engagements. Taking holding such as if must be issued to that of diversity democracy based international relation building. As to such various third world countries a way they while human right couple with diverse identity handling taking into consideration based humanity based advocated [5].

Specially various countries of the third world countries must taking hold first various aspects of right respect then followed by the institution they constructed and hold in a diversification way to handle the diverse reality taking hold among diverse communities exist with sovereign state constituting those diverse having communities. The area as if also might consideration given economic engagements as the whole diverse having as if rather than restricting any mode, means, of production as well as engagements taking holding in general and enhancing up to that of industrialization based manufacturing products in large amount as such might simply resulted taking holding new additional products previously or currently taking hold in

indigenous way as well also only in a limited way for the local level substance. As if with consideration given first and accepting to be enhanced as the macro level and beyond as if coming to produced and need to advocacy for global market as if might its success in question. But the area consideration taken first well-handled even the global citizens might equally get the chance to have now as searched before as a new product might result [6-9].

Sociopolitics

Sociopolitics is among those perspectives that to be included in diverse identity theory as the big ideal having of the case issue to well handle diverse social aspects exist among various communities across the globe as if the big determinant of communal diverse identity belongs to each community having several social aspect including norms, social ethical values, cultural elements and so forth. The theory also states that this divergent identity forming social aspect must be included in international context of utilization to bring unity among statehood as if then utilization as among the pretext that statehood based formation of alliances for cooperation among each other as if also using such pretext as among additional determinants of the international relation building criteria specially while independent and sovereign states as big having divergent and diverse communally having groups of communities as communal level as well belongs to each and every members of the respective communities as if casing such among others that sovereign states could deal on while talk of international relation taking hold and even arranged from the beginning [10]. As to such divergent in social aspect to mean diversity and diverse identity causing as if possibly issued and a number of some area also must be interrelated with this big identity determining cases of the case of social issue. Divergent in social issue to mean at least partly among the factors that mentioning or stating as identity even based on myth building and other criteria of identity formation as if genetically also interrelation can have been possible while socially constructing can make more divergent to become interrelated as identity formation in new way as well also among the criteria that can able to interconnect, intercommunicate including interaction building among very divergent seems locally or other area based existing settlement having of the case of diversity and diverse identity of anywhere exist communally or beyond. In such case this identity determinant factor of social issue must be recognition given, must be respected, recognized as well as issue stating such as the collateral building at international level among statehood forming alliance as well as unions between statehood sovereign states and beyond as if must be obliged and taking into consideration as a compulsory obligation taking hold while international relation as if arranged. Social diversity and diverse identity and its determinants must be respected, recognized in line with human right consideration and reconsideration. Diversity in the area of social aspect that exist among diverse having communities must be equally recognition given. This is because as the big determinants of diversity and diverse identity among all social aspect as if the essentially consideration given aspect while societal diversification taking into embracing. Norms and ethical values are the most

essentially taking into consideration while identity variably variety issued. Norms and societal values guiding the way livelihood leading to that of at the communal level to that individual family level as if among language way of communication socially constructed cultural norms might taking into embracing as if also historical as well as built myth as if also consideration possible. Social issue as if big ideal that must be issue while international relation taking place as the case directly or indirectly related to the protection of human right as the reality exist among various nations and communities. Social issue respected to mean that national and nations issue might relatively protection as if equally consideration given. Diverse social issues equally consideration given as the protection, recognition giving as well beyond among the elements of social aspects as communal norms, communal values, ethical values, cultures, languages, religion, etc. as if must be equality based consideration given as the big or consideration giving as among the determinants of not only mentioned as the reality among the respective community of any but also considering as among the determinants of the identity among diverse identity having communities that equally inherently to the generation as well as upheld minimally individuals of the members of the community as if individual talent, proficiency as well beyond taking into consideration also must be taking into holded while managing international relations among the sovereign states/countries as if such issue might equally consideration given the way domestically human and democratic right safeguarding taking hold as demographically diverse communities having own diverse identity as if lack of recognition and protectional delivery for diverse identity exist among diverse having communities as if surely lead to violation and hampering among diversity and diverse identity as if this directly lead to violation of human right as the way livelihood leading to the individual members of the respective community of any and beyond guided by the norms built communally and shared among the members as well as inherited to generation including the work results of the strongholding members of the community as if also protecting the talent of the strongholding of any member of the certain community as if also among the big asset to be taking hold while social aspect and diverse social aspect taking into consideration given at international level dealing for international relation of any [11-14].

Econopolitics

In the area of international interrelation building economic aspect must be given priority as a neutral agents from the agents and representatives of the state from the side of the government while collateral communication building since economic engagements through transboundary companies, small firms as well as employing several minds from oversea as if also including trade activities as if must be consideration give as while agents of the state of the politicians including the head of state as if given priority to their power to handle well for long as the case issue of not free from biased political engagement to handle priority to their handling of the state governance though other means beyond political engagement. In such case as big transboundary companies as well as small firms from the side of the government as well as non-governments as if making self-free

from political state based agendas of collaterally taking into consideration international laws as the better and best determinants of the employment and their economic and non-economic engagements as if free of self-based interest either for the side of managers as well as employees lifetime within the company similar to the politicians to engage self on power without benefit considering of the side of the people of the destination as well as the origin that the headquarter of the companies as well governmental organizations operate their function as the center of the regulation, control as well of other issues taking hold in free way, neutralized way as if among the consideration by the economic engagement building by transboundary means of communication different from the agents from the side of political handling groups based on the centralization of the state's foreign policy elsewhere exist. In such case internationalization of the means of communication either through engagements building as well as economic intercommunication as such making such engagements free from the more strong intervention of the state to that of the economic sector as if largely minimize the violation of rights of the diverse having citizens at least if transition to other government taking holding taking place as if all in the hand of the government mean that all in the hands of the government and politicians as the whole citizens taking livelihood leading by the mercy of the timely handling political governance rather than rule of law consideration that at least minimally consideration given at international level. But internationalizing the issue of economic sector engagement and fair benefit dealing must be issued while diversity and diverse identity as if well handled, well utilized in fair way from economic engagements taking place within their original country to that of the whole diverse and diverse identity having communities as well as their respective individuals members and beyond without ignorance, partiality taking into place in sustainable way without any interruption. The consideration and reconsideration must be fair utilization given priority to life-to-life or-else ahead to the right to life as if minimally coming up with good economic engagement contribution to life-to-life as if unquestionable but priority giving to the former as if ahead consideration to the former as if among the ideal of diversity democracy as well as diverse identity theory of the perspectives of Sociopolitics as well as Econopolitics. In such case by no means economic engagement given priority to human and natural rights but using economic growth and developmental determinant for the utilization to come up with Sociopolitics as if identity based regulation of protecting as well as consideration and reconsideration as if minimally or largely the case of consideration giving to the indigenously taking hold economic engagements and followed by enhancement to factory level and beyond as if the major target of Econopolitics to the way modernization taking hold for the sake morality and legality issue consideration taken since manageably the issue of international relation taking hold based on national interest as well taking holding equally right-to-life, social aspect identity as morality and ethical social values consideration with as if mandatory. The case of legality interrelation with customary law and morality since the latter both equally interrelated in various aspects. The major economic engagements must collateral as if interrelating various stakeholders from various original

countries or sovereign states as if for the case if problem happened in certain countries of the originally engaged building in the respective taking hold collateral economic sector of any might minimally saving self and the benefit of any stakeholder via substituting as if taking into consideration might happen. The major issue of collateral communication and intercommunication building taking into place according to the ideal of Econopolitics as if majorly saving self, saving all as if saving money stakeholders including the benefits and right of any at least to the side of the population without consideration giving the diverse area that exist with regard to identity and beyond. All must use as if interrelation building at international level to save the benefit and equally the consideration of all should to be used without the violation of right of any whether the case in the original country making intercommunication as the big ideal of Econopolitics case of international relation building and beyond.

At last, the area and ideal of Econorelativism as if must be benignly taking into consideration mandatorily. In such a way Econorelativism issue of handling well of the existing modes, means and economic engagements but also enhancing to factory based as the case might lead to the indigenously taking hold to factory based products as well as industrial revolution might ahead must incorporate those recently indigenously produced as if modernizing more ahead might must be followed according to the ideal of Econorelativism ideal and philosophical thought. Issue of handling well and positivity building must be followed by entering into the case of factory based product manufacturing as industrialization must followed the well handlement of the indigenously exist elsewhere across the globe among communally exist diverse having communities. In such case how much and how your locally or indigenously exist economic though might lead to promotion to the industrial based as well as mechanized based enhancing taking place as the means and mode of production contribution for the globe as among the opportunity and ideal to be utilized while enhanced more locally and its productivity checked more by enhancing to locally built industrialization and other modern sense of economic engagement taking hold. Promotion of any indigenously exist statehood based locally practiced economic engagement, mode of production or means of production as if must be consideration given since new way of statehood economic handlement and system of handlement must be obliged to compete with other statehood formed relation building by others through technologically handling more in enhanced way by local entity of any taking hold as if largely statehood governing must take responsibility for such in planned and globalized way simply not only benefiting locally of the locally practicing community of diverse having economic thought and pragmatic ideal but also contributing more to the global context as an ideal of newly enhanced or taking holded more for centuries or years as if naming such instance in practical way to make known at the global context and contribute mentioning or stating equally might the other statehood one of beginning talk of international relation and other alliance forming team based or through leadership as if might taking and practicing at known base having economic thought since contribution at the global level for the utilization

and benefit taking hold of the citizens of the globe as if big ideal of contribution of other side for self-entity simply might also make to promote more by equally working up such newly enhance technologically based forming alliance for such enhancement as also making among the required not only talking and stating based giving and taking information alone but also making self and others for us based ideal taking holding equally to work up on it to make more enhancing and collaterally stating both together as if ours and concurrently working up on possible and enhancing more to mean that benefiting from such more ideal must be included with the agreed up on documents, covenants, conventions as well as any other document based to be utilized as the legal guidingline of collaterally or internationally based agreed up relations.

Ecopolitics

In one sense according to the ideal of this perspective as if the case of utilizing various transboundary natural settings such as transboundary rivers, lakes, etc. to be among the big determinants to be designing collateral projects on the side of those natural setting to be utilized and give service or appropriate service to that of not only to the original or any criteria to some in unfair manner as if equally taking holding the projects or various projects on the side of those natural setting without consideration giving of the boundary of those sharing natural settings of any as building a dam for hydroelectric for the original country might be used for another country as a means of peace making between the original and other countries that shared the river settings. While intercommunication taking place for the usual corporation towards peace making, towards mutual benefit building as if means and mechanism of international relation building that might be free from collateral based power struggle between countries including to among the friend countries exist beyond their bilateral and multilateral international communication but building and infrastructural intercommunication among sharing countries and beyond as if the case might be the source and means of peace building and alliance formation on the area of not only advantaging self but also beyond. Equally in such majorly saving the benefit of the citizens in the largely taking place going beyond the political line upping of domination building in the domestic politics as well beyond. But case of domination building in the area of friend based group or family based empire building of any might lead to the violation of rights of the whole citizens based on the consideration of diversity and diverse identity as one among tried to build dominance in the domestic politics as other group of diverse and diverse identity having might tries to counter and making counter reaction to divert the agenda of domination by one diverse identity having from within the form of struggle as well also might leading to having a wing of the case of all might leadenly politics of the globalization time internationalizing unquestionable might equally contributing the struggle for power might lead to armament based struggle that might sometimes disastrous and destruction taking hold. But if the alliance formation via using natural setting based interconnecting project for the benefit of the attached countries beyond single or bi-state alliance or international relation taking

into holding as if majorly the case might if interconnection, intercommunication taking hold earlier as if realization of the objective behind peacemaking and diverting the one that negatively affecting the benefit of the whole citizens or partly of the citizens. In such a way majorly the case usually beyond the peace is making if encouragement of the mutual benefit projects designing and interconnection of the stream countries taking into place in planned form of formation of alliance not on ideal but in practical of infrastructural or service delivery based interconnection, intercommunication building taking place. Working up on trans boundary based exist natural setting to benefit all exist streams and livelihood leading diverse having communities on the banks of such without to one domination building over others as if also casing usual conflict must be resolvable taking up on with equation taking hold not to benefit one among might lead conflict as such knowingly or unknowingly making others to suffer and to not benefit from the projects of self-handled and beyond must banned internationally. As such issue also making sufferer might knowingly or unknowingly leads to equally or unequally to war fare as if struggle for politics must be free from such utilization banning and freeing self for self-benefit alone as well hindering others as if also must be legally banned and international relationship building issue also must incorporate such ideal as a document based parts of the to be agreed up as the case of one area interrelationship building deviated from the ideal of mutual category of utilization concurrently by making such natural setting as a means of communication to enhance the benefit taking hold from the projects around the setting as well as also mutually peace deal making must be taking hold as the case usually issued largely not at one time but might take also several years as negotiation and peace-deal area of such around natural setting might come and want with the idea of new projects come to being and planned as if the issue of handling well in some area across the globe might lead to the ideal having to make deal-talk on the other area existing natural setting of the same or similar type of natural setting and beyond. If the one in some parts handled well the one that exist in other even distantly exist also possible handled well. As such issue also must be incorporated into the peace-deal talk as well as the agreed up on document part while finally agreement taking up of the sake not only for the agreed up on countries but also for the sake of other countries that exist beyond the agreed up on documents signed. But issue of considerable problem bearing some other area might taking hold possibly taking into consideration obliged as the case finally nothing to us might something to others with in short period or long period of time while terming of time taking into consideration. The issue of managing and making an attempt to manage problem in some parts of the globe by other part existing statehood as if obliged and must be encouraged equally with self and others might lead to cooperation between statehood or states that exist elsewhere beyond of the other side of deviating from normal way of talking while international relation building must be changed and transformation of the way international relation taking hold must be modification taking into embracing obliged. As such issue consideration giving might lead to foresting the area equally consideration to build more natural resources as if might lead to the formation other additional natural resources also

possible exist. The area of consideration must be related to the upholding of live and aliving of human beings on earth in sustainable way as the living and aliving of humanity and human kind as known to all determined by the existence and inexistence of natural resources for utilization based generation conservation as well as formation of new natural resources taking holding as if essential and obliged. In such case rivers, lacks taking holding as a means to taking hold international relation for good as if not only for domination of utilizing alone but for cooperation among the siding state as if obliged. In such case possibly issuing those natural setting at international level as if obliged.

Socio-Economic politics

Economic must be totally or partially interrelated with social aspect issue of handlement taking into consideration and existing well handlement and vise verse at domestic level but issue of economic collateral building must go beyond domestic level according to the ideal of this perspective.

This principle and philosophical thought states that social and economic engagement and implementation at domestic level in well manner must taking into consideration equally in appropriate way at international level while international relation taking into place. In such a way as if well handling diverse social groups of communities as well as human right protection for all diverse social heterogeneous constituting communities up to individual level of variety taking into placing. In such sense, while heterogeneity in social aspect to mean that linguistic consideration, ethnic consideration equally with economic engagement taking into consideration in fair manner as if taking holding at domestic then must be issued at international level while taking into embracing to build international interconnection and intercommunication building. While corporation taking hold in the form of economic alliance building as if social aspect handlement with in at domestic level must be among the criteria for domestic based more enhancement of the exiting situation in total or partial way to well handle diversity in social aspect to mean making beneficial in economic aspect through interconnection of the statehood for the benefit building of the total diverse having communities as well as the members of the respective diversity and diverse identity having communities elsewhere exist.

It requires enhancing social as well as economic context concurrently as if mandatorily taking into place. Issue of managing the social aspect in relation to economic aspect handlement as if must be issued at international level. But locally consideration giving first must be essentially taking holding obliged and compulsory as if issue of such coming up to the global arena while international relation taking hold among statehood communities as if must be issued as among the ideal taking hold first among all as the determinants of international relation. Issue of such must be seen as socially equally interrelation having with economic contexts at least at the local level. This is because identity largely mandates economic engagement and equally consideration giving both as if must be taking into place. Since the issue of such might equally

consideration giving not only benefiting economically but also managing and safeguarding identity taking hold by certain upheld community of diverse having identity from other diverse having community either nearby exist or distantly exist from the respective taking hold community of the respective statehood dealing among each other. This must be seen from the eyes of international relation building on enhancing to that of social aspect as an identity must come up with economic engagement enhancement building. As such both equally inseparable as to that of social aspect and economic engagement among any community that practicing both at a time existing as if normal [15].

SUMMARY AND CONCLUSION

This study coming up at least three theories inclusively Sociopolitics, Econopolitics, Ecolopolitics as well as Socio-economicpolitics This all equally consideration given the contribution of diverse social aspect handlement, the way economic engagement taking place as well the utilization of ecological and natural setting respectively for the issue of international relation building among sovereign states. In such case, social aspect to mean the well handlement of diverse social elements and identity of the taking holded diverse and diverse identity having communities. But issue of diversity handlement beyond boundary demarcation of restricting to a single statehood country as if based on building transboundary economic engagement building as if possible of creating beneficial international intercommunication not only among states but also using beyond state actors with in international relation building as a big criteria. In such a way the same is true for the transboundary natural settings.
