

# Current Update in Psychological Abnormalities

Stella Brown\*

*Editorial Office, Journal of Psychological Abnormalities, Brussels, Belgium*

## EDITORIAL

On behalf of the Board of Journal of Psychological Abnormalities survey and co-editors, I am glad to present Volume 10, Issue 3 of the journal. It is an open access peer-review journal in the field of Psychology. Journal of Psychological Abnormalities is having International Standard Serial Number (ISSN) of 2471-9900.

With the cooperation of the senior and associate editors, we have created a set of practices and an environment that encourages the delivery of quality reviews in a timely fashion. These policies include the Expedited reviews. Manuscripts are reviewed at the editor-in-chief, senior editor, and associate editor levels before being sent out to reviewers. At any of these stages, an editor may reject the manuscript or send it back to the author for improvement. This gets a response to the authors much more quickly and preserves reviewing resources for other manuscripts. In the case of immediate revision, authors are given a chance to provide an enhanced manuscript to the eventual reviewers, thus increasing the odds of acceptance. Associate editors complete a short evaluation for each reviewer on each manuscript. This process reminds reviewers that they are responsible for timely, high-quality reviews and also serves to help identify future associate editor candidates.

All scientific manuscripts including editorials are subjected to peer review process. At many instances members of the editorial board also prefer to submit their articles. In fact, JPAC encourages editorial board members to actively contribute. However, no special privileges are given to anyone.

Journal of Psychological Abnormalities follows a double-blind peer review process where the identity of authors and reviewers is not revealed to each other. The review generally involves two to six subject experts. The editorial team consisting of associate editors and assistant editors are involved in the entire article cycle starting from submission to final recommendation. The entire review process is carefully structured to minimize the possibility of bias.

Journal of Psychological Abnormalities survey functions on principles of scientific excellence, publication ethics and transparency. It makes it the authors easy to submit their articles through the online manuscript submission and review system

managed by longdom as the publisher. Journal follows strict guidelines related to publication ethics and conflict of interests.

Main aims and objectives of this journal is to publish more and more quality articles of research, review, short commentary, mini reviews, case reports etc which will be very useful for the readers. We would like publish more articles related to:

- Abnormal Child Psychology
- Brain Disorders
- Child Abuse
- Child Behavioral Psychology
- Child Development Psychology
- Child Psychology Disorders
- Children Psychopathology
- Clinical Child Psychology
- Experimental Child Psychology
- Forensic Child Psychology
- Neurodegenerative disease
- Neurological disorders
- Pediatric Psychology
- Pediatric Psychology
- Sleep Disorder

The average download per article is increasing and all these are promising signs. Now we are in this stage only through the continuous support of Editorial Board Members and the intellectual generosity of the readers and contributors (authors and reviewers).

In future, we would like to publish more quality articles related to recent psychology that show the good process. This will be very useful for future creative and innovative technologies.

With the support of authors, Editorial board members, reviewers and readers of Journal of Psychological Abnormalities survey

became very successful with good number of quality articles and will reach good heights with this continuous support. Thanks to all the reviewers and editors whose cooperation and hard work made

this possible. JPAC publishes up-to-date, high-quality and original research papers alongside relevant and insightful reviews. This journal is always integrative and challenging with the latest updates in computer science and engineering.
