NATURAL REMEDIES

Perimenopause is your body's natural transition into producing less estrogen. As your ovaries generate less of the estrogen hormone, your periods become unbalanced. You may start to pass over periods. Eventually, your monthly cycle will prevent completely. Once you’ve departed a year without having a period, you’ve reached full menopause. For the average American woman, this happens approximately age 51. The symptoms interconnected with perimenopause can last ubiquitously from a few months to several years.

The menstrual transition is distinct by your body’s adjustment to new hormone levels. This can bring symptoms of vaginal dryness, hot flashes, and impenetrability sleeping. Your sex oblige might decrease and your metabolism may sluggish down. These symptoms can be treated with prescription hormone replacements, but you might want to try home remedies first. Maintain analysis to find out about home remedies for perimenopause.

Ginseng

Ground ginseng root can be obsessive as a tea or taken in a capsule form. It’s readily available in most drugstores, some supermarkets, and online. Ginseng has been used as a sedative in Asian countries for centuries. While there’s no evidence that ginseng can treat hot flashes, the soothing effects of ginseng have been found Trusted Source to improve the quality and period of your sleep.

Black cohosh

Black cohosh is an herb that is resident to North America. The roots of black cohosh are ground into a nutritional supplement. Black cohosh is one of the most popular natural remedies that women use for menopause symptoms. But there is incompatible evidence about how effective it is. At least one review Trusted Source of placebo-controlled studies involving black cohosh for menopause symptoms indicated that it helps with menopause symptoms.

Soy

Changing up your diet to include more soy yield may relieve your menopause symptoms. Soy contains a plant-based estrogen called isoflavones, so it can help you adjust to the smaller amounts of estrogen that your body is now producing. Hot flashes, night sweats, and even vaginal dryness may be improved by this remedy. Soybeans, edamame, tofu, and soy milk are the most direct ways to integrate more soy in your diet. You can also purchase soybean extract to use for your symptoms.

Vitamin D

When your ovaries stop producing estrogen, you’re in a higher risk Trusted Source category for developing osteoporosis. Taking a vitamin D supplement might not improve hot flashes or vaginal dryness, but it will help make your bones stronger Trusted Source. Vitamin D also may boost your mood, which can help your self-perception and become constant your emotions.

Wild yam

Wild yam is a botanical that has potential estrogenic activity. This means that wild yam supplements may mimic the effects of estrogen on your body. Researchers are calling for more studies into the way plant extracts like red yam may help women in perimenopause. Current research Trusted Source indicates that wild yam is not as efficient as other remedies. If you’d like to try wild yam, you can buy a cream to apply topically, or take the extract in pill form.

6. Yoga

Yoga has become a popular practice for women that are impacted by insomnia, mood swings, and hot flashes as a effect of menopause. Studies suggest that yoga may help you nap better Trusted Source and result in a more constant mood Trusted Source during perimenopause. Erudition yoga in a class setting or practicing at home using internet tutorials may also improve mindfulness and renovate a peaceful feeling to your everyday life.

7. French maritime pine bark extract

Pine bark extract is also called Pycnogenol. It can be purchased online or at some health food stores. This extort is made up of plant-based hormones and crude chemicals called Flavonoids. A study Trusted Source found that taking Pycnogenol over the course of four weeks extensively enhanced hot flashes and other menopause symptoms.

8. Dong quai

Dong quai is a remedy from traditional Chinese medicine. The root of this plant is used as a tincture, an extract, and as a tea. The
benefits of using dong quai for perimenopause are unclear. Though some women state that their sense of well-being improved after using it, a review of non-hormonal therapies for perimenopause indicated that dong quai had no effect on hot flashes and other symptoms. You can try dong quai by taking a herbal supplement or by consumption tea prepared from a dong quai tea bag.
