Our daily use chemical products "the enemy we trust" phthalates, risks & challenge to avoid....An update!

Malak A. Alia

Prime Health Care Group, UAE

Abstract

Our literature review study reflects the light on some chemical substances which are widely used in many & different aspects of our children daily practices & try to get the answers for the following important questions. Do these chemicals that our children are widely exposed to since even their prenatal period & throughout their lives have real high risks & dangers on their health? Is the use of these chemicals essential for our kids or we can avoid and replace them with other non-risky substances & hazardous chemical free products...!! Recently, a lot of systematic review studies have been done to investigate the possible relations between the most common chemical substances that we use daily and possible risks & health problems that may affect our children. Among the chemicals that have been studied intensively in the last few years are Phthalates which are known as endocrine disruptors due to their anti-androgenic and/or estrogenic effects!

Methods & Results: Our study tries to search through, emphasis on & spot the light on the use of common chemical substances (Phthalates) that are widely used in most of our children life aspects, searches for their possible risks & hazards on our kids' health, tries to get relations & connections between these substances & common pediatric health problems & disorders. In our study we reviewed the data collected from many evidences based systematic reviews and Cohort studies have dealt with these hazardous substances & stated the high incidence of their risks & their bad impacts on our kids' health & prove the relation of these chemicals to certain respiratory problems specially wheezing in childhood, ADHD, some atopic conditions and endocrine disruptions among children.
